

Formula for determining special education allotments:

# of students X 3.5/37 = Allotment

Rationale:

The maximum number of segments a co-taught student receives is 3.5. Multiple 3.5 times the number of students in the general education setting. Divide that by the number of segments per week. That will give you the number of allotments needed to cover the segments. You can define an allotment as one teacher or two paraprofessionals.
