

Georgia Educational Grant

Powered by ESE Networks

State of Georgia grant monies have been made available for equipment packages to support the implementation and development of Georgia's CTAE Audio/Video Technology and Film career pathway. The goal of this grant with ESE Network is to leverage its experience in the film and audio visual industry and its experience with U.S. Education TV to provide high schools with the equipment, server storage capacity, and technical support to provide students with opportunities to earn course credit towards the Audio-Video Technology and Film career pathway. This goal will be accomplished through ESE Networks partnerships with schools across Georgia.

Participating schools will receive a "Studio in a Box" that will enable them to film and broadcast high-quality, HD video as well as access to the ESE Networks platform for two years. Access also includes 1 TB of storage space and ESE technical support.

This grant is available to all Georgia public high schools and Georgia public charter high schools. Once approved, schools will be contacted to schedule a delivery time of the equipment by ESE Networks. Delivery and on-site training is personally provided by ESE Networks. "We want to see your program succeed!"
