Achievement Level Descriptors for Physical Science
Achievement Levels and Achievement Level Descriptors

With the implementation of the Georgia Milestones Assessment System, Georgia educators have developed four achievement levels to describe student mastery and command of the knowledge and skills outlined in Georgia’s content standards. Most students have at least some knowledge of the content described in the content standards; however, achievement levels succinctly describe how much mastery a student has. Achievement levels give meaning and context to scale scores by describing the knowledge and skills students must demonstrate to achieve each level.

The four achievement levels on Georgia Milestones are Beginning Learner, Developing Learner, Proficient Learner, and Distinguished Learner. The general meaning of each of the four levels is provided below:

**Beginning Learners** do not yet demonstrate proficiency in the knowledge and skills necessary at this grade level/course of learning, as specified in Georgia’s content standards. The students need substantial academic support to be prepared for the next grade level or course and to be on track for college and career readiness.

**Developing Learners** demonstrate partial proficiency in the knowledge and skills necessary at this grade level/course of learning, as specified in Georgia’s content standards. The students need additional academic support to ensure success in the next grade level or course and to be on track for college and career readiness.

**Proficient Learners** demonstrate proficiency in the knowledge and skills necessary at this grade level/course of learning, as specified in Georgia’s content standards. The students are prepared for the next grade level or course and are on track for college and career readiness.

**Distinguished Learners** demonstrate advanced proficiency in the knowledge and skills necessary at this grade level/course of learning, as specified in Georgia’s content standards. The students are well prepared for the next grade level or course and are well prepared for college and career readiness.

More detailed and content-specific concepts and skills are provided for each grade, content area, and course in the Achievement Level Descriptors (ALDs). ALDs are narrative descriptions of the knowledge and skills expected at each of the four achievement levels and were developed for each grade level, content area, and course by committees of Georgia educators in March 2015 and July 2015. The ALDs are based on the state-adopted content standards.

ALDs show a progression of knowledge and skills for which students must demonstrate competency across the achievement levels. It is important to understand that a student should demonstrate mastery of the knowledge and skills within his/her achievement level as well as all content and skills in any achievement levels that precede his/her own, if any. For example, a Proficient Learner should also possess the knowledge and skills of a Developing Learner and a Beginning Learner.

<tr>
<td>• recognize the differences between atoms and molecules;</td>
<td>• identify the structure of the atom;</td>
<td>• examine the structure of the atom in terms of proton, electron, and neutron locations, atomic mass and atomic number, and atoms with different numbers of neutrons (isotopes) and explain the relationship of the proton number to the element’s identity;</td>
<td>• describe nuclear energy, its practical application as an alternative energy source, and its potential problems;</td>
</tr>
<tr>
<td>• describe the movement of particles in solids, liquids, gases, and plasmas;</td>
<td>• recognize that electrons are involved in bonding;</td>
<td>• compare and contrast ionic and covalent bonds in terms of electron movement;</td>
<td>• differentiate between alpha and beta particles and gamma radiation;</td>
</tr>
<tr>
<td>• use the Periodic Table of the Elements to locate metals, nonmetals, and metalloids;</td>
<td>• compare and contrast the atomic/molecular motion of solids, liquids, gases, and plasmas;</td>
<td>• identify the types of radioactivity and differentiate</td>
<td>• predict formulas for stable binary ionic compounds based on balance of charges;</td>
</tr>
<tr>
<td>• describe energy transformations;</td>
<td>• explore the nature of matter, its classifications, and the system for naming types of matter;</td>
<td></td>
<td>• describe solutions in terms of concentration and conductivity;</td>
</tr>
<tr>
<td>• explain that colors are distinguished by differences in wavelengths/frequencies;</td>
<td>• describe the three types of heat energy transfer (radiation, conduction, convection);</td>
<td></td>
<td>• demonstrate that solubility is</td>
</tr>
</tbody>
</table>
- describe how the behavior of waves is affected by medium (air, liquid water, solids);
- explain how the parts of a wave are affected by changes in amplitude and pitch;
- demonstrate series and parallel circuits;
- identify three types of heat transfer;
- recognize simple machines that make work easier;
- recognize appropriate laboratory techniques;
- suggest reasonable hypotheses for identified problems;
- recognize possible effects of measurement and calculation errors;
- identify reactants and products in a chemical reaction;
- identify simple machines;
- recognize examples of forces; and
- recognize that many electrons produce electricity.

</tr>
<tr>
<td>recognize a balanced equation;</td>
<td>recognize balanced and unbalanced forces;</td>
<td>use IUPAC nomenclature for transitions between chemical names and chemical formulas of binary ionic compounds (containing representative elements) and binary covalent compounds (carbon dioxide, carbon tetrachloride);</td>
</tr>
<tr>
<td>recognize balanced and unbalanced forces;</td>
<td>describe electromagnetic and mechanical waves;</td>
<td>apply the Law of Conservation of Matter in a chemical reaction;</td>
</tr>
<tr>
<td>identify methods of electron transfer;</td>
<td>identify types of circuits; and</td>
<td>calculate density when given a means to determine a substance’s mass and volume;</td>
</tr>
<tr>
<td>define voltage, resistance, and current;</td>
<td>describe a permanent magnet.</td>
<td>balance chemical equations (synthesis, decomposition, single replacement, double replacement);</td>
</tr>
<tr>
<td>relate temperature, pressure, and volume of gases to the behavior of gases;</td>
<td>recognize that many electrons produce electricity.</td>
<td>calculate the velocity of a particle.</td>
</tr>
</tbody>
</table>

- explain the flow of energy in phase changes through the use of a phase diagram;
- explain magnetism and/or its relationship to the movement of electrical charge as it relates to electromagnets, including simple motors and permanent magnets;
- solve scientific problems by substituting quantitative values or using dimensional analysis and/or simple algebraic formulas as appropriate;
- determine the half-life given a graph of radioactive decay;
- relate frequency and wavelength to the energy of different types of electromagnetic waves and mechanical waves;
- compare and contrast the characteristics of electromagnetic and mechanical (sound) waves;
- predict which machine would have the greatest mechanical advantage;
- calculate the velocity of a particle related to temperature by constructing a solubility curve;
• describe solutions in terms of solute/solvent;
• compare and contrast the components and properties of acids and bases;
• determine whether common household substances are acidic, basic, or neutral;
• differentiate between conduction, convection, and radiation;
• determine the heat capacity of a substance using mass, specific heat, and temperature;
• compare phase changes;
• calculate velocity and acceleration;
• apply Newton’s three laws to everyday situations;
• relate falling objects to gravitational force;
• explain the difference between mass and weight;
• calculate amounts of work and mechanical advantage for simple machines;
• investigate the phenomena of reflection, refraction, interference, and diffraction;
• relate the speed of sound to different mediums;
• explain the Doppler Effect in terms of everyday interactions;
• investigate static electricity in terms of friction, induction, and falling object;
• apply alternating and direct current in a real-world scenario;
• solve problems related to voltage, resistance, and current;
• explain how factors affect the strength of an electromagnet; and
• predict outcomes given series and parallel circuits.
- conduction;
- explain the flow of electrons in terms of alternating and direct current;
- explain the relationships between voltage, resistance, and current;
- compare and contrast simple series and parallel circuits;
- describe an electromagnet;
- recognize that different explanations can be used to explain a single set of data; and
- use technology to develop and test experimental or mathematical models.
