Personalized Mathematics Pathways: Opportunities for ALL Georgia Students
Purpose:

The purpose of this presentation is to provide district leaders, school administrators, counselors, and teacher leaders with information related to personalized mathematics pathways for all students to have access to opportunities to advance in mathematics based on their post-secondary goals and aspirations.
Be Intentional
Georgia’s K-12 Mathematics Standards
Adopted in August 2021
Implementation to Begin in Fall 2023

KEY TAKEAWAYS FROM THE NEW STANDARDS ADOPTION:
• The grade level/course key competencies represent the standard expectation of learning for students in each grade level and course.
• The standards presented for each grade level and course represent the ultimate expectation for mastery at each grade level for each big idea.
• The standards are presented through a logical progression and provide detailed information as students work toward mastery of the key competencies/standards of the grade level/course.
• The standards are each followed by more detailed learning objectives that further explain the expectations for learning in the specific grade level/course standards.
• The Georgia Department of Education does not mandate a specific strategy or approach to solving a problem.
Georgia’s K-12 Mathematics Standards

Adopted in August 2021
Implementation to Begin in Fall 2023

KEY TAKEAWAYS FROM THE NEW STANDARDS ADOPTION:

• The philosophy of the Georgia Department of Education is to reinforce a strong foundation of reasoning and fundamentals in the early grades that builds on relevant pathways for future success.

• Allow students to experience a sense of self success and self-worth throughout the process of learning. Students should be provided with learning opportunities that focus on mastering fundamental topics and make connections that strengthen understanding.

New Pathways Document Available

Georgia’s K-12 Mathematics Standards

The State Board of Education approved State School Superintendent Richard Woods’ recommendation to adopt the new Georgia’s K-12 Mathematics Standards. The 2021-2022 and 2022-2023 school years will be dedicated to teacher training on the new standards, with implementation to follow in 2023-2024.

The new standards are truly Georgia-developed. They were drafted by Georgia mathematics teachers with input from educational leaders, parents, students, business and industry leaders, and community members. They are designed to provide a strong foundation, to be clear, understandable, and present a reasonable amount of content in each year.

Throughout the current school year, teachers will receive training and professional learning, new resources will be developed, and assessments will be aligned to the updated standards. In addition, communication will be provided to parents to ensure a smooth transition.

Required Course per SBOE Graduation Rule

Georgia’s Mathematics Graduation Requirements for High School

- Algebra: Concepts & Connections
- Geometry: Concepts & Connections
- Advanced Algebra: Concepts & Connections
- 4th Core Mathematics Course
Mathematics Programming Considerations for High School

The minimum core mathematics course requirements to earn a high school diploma in Georgia include:

- Algebra: Concepts and Connections or the equivalent
- Geometry: Concepts and Connections or the equivalent
- Advanced Algebra: Concepts and Connections or the equivalent
- A fourth core mathematics course option

Though all students have the same core mathematics requirements for graduation, there are many paths to meet those requirements. For example, STEM/STEAM programming offers unique opportunities for content in mathematics to be blended with other content areas for students to develop a deep understanding of the expectations outlined in each grade level and course.

The Georgia Department of Education has created a catalog of secondary courses to help students meet their graduation requirements. These course options include support, enrichment, enhanced, advanced placement, International Baccalaureate (IB), dual enrollment, and more.

The mathematics pathways of courses should be offered as an option for all students based on student interest and post-secondary goals. All paths should provide open access for all students with multiple on-ramps and off-ramps as they matriculate through the secondary grade levels.
Fourth Course Options for Students
Mathematics Graduation Requirements for High School

First Three Required Courses

- Algebra: Concepts & Connections (or the equivalent)
- Geometry: Concepts & Connections (or the equivalent)
- Enhanced Algebra: Concepts & Connections (or the equivalent)
- Enhanced Advanced Algebra and AP Precalculus: Concepts & Connections

OR

- Advanced Algebra: Concepts & Connections (or the equivalent)
- Advanced Advanced Algebra and AP Precalculus: Concepts & Connections

4th Mathematics Course Options

- AP Statistics
- Statistical Reasoning
- Computer Science Courses
- Precalculus
- Advanced Finite Mathematics
- AP Calculus AB
- AP Calculus BC
- Linear Algebra with Computer Science Applications
- Calculus
- AP Calculus AB
- Mathematics of Industry and Government
- Mathematics Capstone Course
- Advanced Financial Algebra
- Differential Equations
- Engineering Calculus

*This course is an equivalent course to high school Algebra: Concepts and Connections for eligible Grade 8 students.

- Multiple options for 4th core mathematics courses
- Co-Requisite Support courses offered, as needed

Fourth mathematics course options may be taken simultaneously once the prerequisite for each course is satisfied.
Modernized Advanced Algebra

Advanced Algebra: Concepts & Connections

DATA SCIENCE
FUNCTIONAL REASONING
ACCESSIBLE CONTENT FOR ALL STUDENTS
STATISTICAL REASONING
21ST CENTURY SKILLS
TECHNOLOGY ENHANCED

Offering a holistic education to each and every child in our state.
The co-requisite support courses are offered for students, as needed, based on local school or district selection criteria. The co-requisite support courses are not stand-alone courses; these courses assist students as they work to earn the required core course credit. Co-Requisite support courses may be taken in conjunction with the core mathematics courses they are paired. These co-requisite support courses provide teachers with additional time to implement wraparound interventions and supports for students in real time as the students are learning the standards in the core course required for graduation.
Acceleration in Mathematics using Gifted Services Model

• Acceleration at every grade level, K-12, with the gifted services model

• Alignment with the gifted model and definition of acceleration

• Alignment with the federal expectations of assessment and accountability

• New enhanced mathematics courses that are open-access for students interested in pursuing higher levels of mathematics
Middle School Enhanced Course

New Middle School Accelerated Option

A new Enhanced Algebra: Concepts and Connections course blending option will be offered for learners seeking advanced and accelerated mathematics in Grade 8. This course option can be provided for all learners seeking to pursue accelerated mathematics content in Grade 8 regardless of the course taken previously. The new Enhanced Algebra: Concepts and Connections course will be provided for students interested in pursuing advanced mathematics courses in middle and high school, including courses that go beyond the four core mathematics course options. This accelerated course option aligns with federal assessment and accountability requirements for the grade level to benefit students and teachers and provides a thoughtful blend of SBOE approved standards.

The Enhanced Algebra: Concepts and Connections course, designed for students who have mastered the Grade 7 Mathematics standards, is a blend of the topics addressed in Grade 8 Mathematics (i.e., linear functions) and the topics addressed in Algebra: Concepts and Connections (i.e., non-linear functions). The content of this course prepares students for the federal assessment requirements, including the content assessed on the Grade 8 EOG and the HS Algebra EOC. Students who successfully complete Enhanced Algebra: Concepts and Connections will be prepared for Geometry: Concepts and Connections as a subsequent course.
High School Enhanced Course

A new course blending option has been made available for advanced learners that includes Enhanced Advanced Algebra and AP Precalculus: Concepts and Connections starting in 2023-2024. All learners should have the opportunity to enroll in support courses and advanced placement mathematics courses at the high school level based on their course-taking patterns at the middle school level. All options should be made available for all students.

High School Acceleration
(Local districts may add additional options, as needed.)

- Geometry: Concepts & Connections (or the equivalent)
- Enhanced Advanced Algebra & AP Precalculus: Concepts & Connections
- AP Calculus AB, AP Calculus BC, AP Statistics, IB Courses
- Dual Enrollment Advanced Calculus & Advanced Statistics Options

*Local school districts maintain the flexibility to offer courses that best meet the needs of students in their school communities.
Personalized Pathways for Students interested in Advanced Calculus Options in High School

NOTE:
Local Districts have the flexibility to create additional pathways that support student success based on the needs in their individual districts.

Personalized, Student-Centered Decision Points

Open Access for ANY interested student

*Following completion of 7th grade mathematics, all students have the option to take either 8th grade mathematics or Enhanced Algebra: Concepts & Connections.

**Following completion of Geometry: Concepts & Connections, all students have the option to take either Advanced Algebra: Concepts & Connections or Enhanced Advanced Algebra and AP Precalculus: Concepts & Connections.
High School Supports

Support course option, as needed

**Students must meet eligibility requirements.

Course required for all students, with co-requisite support, as needed.

Course required for all students, with co-requisite support, as needed.

Course required for all students, with co-requisite support, as needed.

NOTE: Technical College Readiness as an ACCUPLACER® Prep Support course may be taken, as needed, for students interested in Dual Enrollment Option B. Students must meet eligibility requirements.

Co-Requisite support courses may be taken in conjunction with the core mathematics courses they are paired with to provide students with the necessary intervention support in real time as they are working toward mastery of the grade-level standards. The co-requisite support courses are not stand-alone courses; these courses assist students as they work to earn the required core course credit.

Offering a holistic education to each and every child in our state.
INTERDISCIPLINARY TEACHING AND LEARNING
GEORGIA’S K-12
MATHEMATICS STANDARDS

MATHEMATICAL PRACTICES

The Mathematical Practices describe the reasoning behaviors students should develop as they build an understanding of mathematics – the “habits of mind” that help students become mathematical thinkers. There are eight standards, which apply to all grade levels and conceptual categories.

These mathematical practices describe how students should engage with the mathematics content for their grade level. Developing these habits of mind builds students’ capacity to become mathematical thinkers. These practices can be applied individually or together in mathematics lessons, and no particular order is required. In well-designed lessons, there are often two or more Mathematical Practices present.

GEORGIA’S K-12 MATHEMATICS STANDARDS

MATHEMATICAL MODELING

Teaching students to model with mathematics is engaging, builds confidence and competence, and gives students the opportunity to collaborate and make sense of the world around them, the main reason for doing mathematics. For these reasons, mathematical modeling should be incorporated at every level of a student’s education. This is important not only to develop a deep understanding of mathematics itself, but more importantly to give students the tools they need to make sense of the world around them. Students who engage in mathematical modeling will not only be prepared for their chosen career but will also learn to make informed daily life decisions based on data and the models they create.

The diagram below is a mathematical modeling framework depicting a cycle of how students can engage in mathematical modeling when solving a realistic problem or task.

A Mathematical Modeling Framework

1. Gather information, make assumptions, and define variables related to the problem.
2. Analyze and revise models, as necessary.
3. Create a model and arrive at a solution to explain the problem presented.
4. Critical thinking
   - Communication
   - Collaboration
   - Creative Problem Solving
5. Evaluate the model and interpret solutions generated from other models. Draw and validate conclusions.
6. Explore & describe real-life, mathematical situations or problems.
GEORGIA’S K-12 MATHEMATICS STANDARDS

FRAMEWORK FOR STATISTICAL REASONING

Statistical reasoning is important for learners to engage as citizens and professionals in a world that continues to change and evolve. Humans are naturally curious beings and statistics is a language that can be used to better answer questions about personal choices and/or make sense of naturally occurring phenomena. Statistics is a way to ask questions, explore, and make sense of the world around us.

The Framework for Statistical Reasoning should be used in all grade levels and courses to guide learners through the sense-making process, ultimately leading to the goal of statistical literacy in all grade levels and courses. Reasoning with statistics provides a context that necessitates the learning and application of a variety of mathematical concepts.

The following four-step statistical problem-solving process can be used throughout each grade level and course to help learners develop a solid foundation in statistical reasoning and literacy:

I. Formulate Statistical Investigative Questions
   Ask questions that anticipate variability.

II. Collect & Consider the Data
    Ensure that data collection designs acknowledge variability.

III. Analyze the Data
     Make sense of data and communicate what the data mean using pictures (graphs) and words. Give an accounting of variability, as appropriate.

IV. Interpret the Results
    Answer statistical investigative questions based on the collected data.

Ongoing Interdisciplinary learning to impact the community and to explain real-life phenomena.

The concepts in each unit are presented based on a logical, mathematical progression. Each unique unit in sequence builds upon the previous unit. The Framework for Statistical Reasoning, Mathematical Modeling Framework, and the K-12 Mathematical Practices should be taught throughout the units.

Mathematical Practices (5.MP.1-8) are integrated throughout each unit depending on the tasks that are explored. It is important to note that MIPs 1, 3, and 6 should support the learning in every lesson.

Offering a holistic education to **each and every child** in our state.
THANK YOU FOR ALL YOU DO!!!
Preparing students for life.
