Hattie, John. (2009.) *Visible Learning: A Synthesis of over 800 meta-analyses relating to Achievement*. New York: Routledge.
 Marzano, R. (2004). *Building Background Knowledge for Academic Achievement*. Alexandria, VA: ASCD

Marzano's (Nine) High-Yield Instructional Strategies

High Yield Instructional Strategies	What the Research says:	How it looks in the Classroom:
<p>Identifying similarities and differences</p> <p>(Yields a 45 percentile gain)</p>	<p>Students should compare, classify, and create metaphors, analogies and non-linguistic or graphic representations</p>	<p>Thinking Maps, T-charts, Venn diagrams, classifying, analogies, cause and effect links, compare and contrast organizers</p> <p>QAR (Question/Answer/Relationship), sketch to stretch, affinity diagrams, Frayer model (see below)</p>
<p>Summarizing and note taking</p> <p>(Yields a 34 percentile gain)</p>	<p>Students should learn to eliminate unnecessary information, substitute some information, keep important information, write / rewrite, and analyze information. Students should be encouraged to put some information into own words.</p>	<p>Teacher models summarization techniques, identify key concepts, bullets, outlines, clusters, narrative organizers, journal summaries, break down assignments, create simple reports, quick writes, graphic organizers, column notes, affinity diagrams, etc.</p>
<p>Reinforcing effort and providing recognition</p> <p>(Yields a 29 percentile gain)</p>	<p>Teachers should reward based on standards of performance; use symbolic recognition rather than just tangible rewards.</p>	<p>Hold high expectations, display finished products, praise students' effort, encourage students to share ideas and express their thoughts, honor individual learning styles, conference individually with students, authentic portfolios, stress-free environment, high-fives, Spelling Bee, Constitution Day, School Newspaper, etc.</p>

Adapted from: Marzano, R., Pickering, D., Pollock, J. (2001). *Classroom Instruction that Works: Research-based Strategies for Increasing Student Achievement*. Alexandria, Va.: ASCD

High Yield Instructional Strategies	What the Research says:	How it looks in the Classroom:
<p>Homework and practice (Yields a 28 percentile gain)</p>	<p>Teachers should vary the amount of homework based on student grade level (less at the elementary level, more at the secondary level), keep parent involvement in homework to a minimum, state purpose, and, if assigned, should be debriefed.</p>	<p>Retell, recite and review learning for the day at home, reflective journals, parents are informed of the goals and objectives, grade level teams plan together for homework distribution; SLCs; teacher email.</p>
<p>Nonlinguistic representations (Yields a 27 percentile gain)</p>	<p>Students should create graphic representations, models, mental pictures, drawings, pictographs, and participate in kinesthetic (hands-on) activities in order to assimilate knowledge.</p>	<p>Visual tools and manipulatives, problem-solution organizers, spider webs, diagrams, concept maps, drawings, charts, thinking maps, graphic organizers, sketch to stretch, storyboards, foldables, act out content, make physical models, etc.</p>
<p>Cooperative learning (Yields a 23 percentile gain)</p>	<p>Teachers should limit use of ability groups, keep groups small, apply strategy consistently and systematically but not overuse. Assign roles and responsibilities in groups.</p>	<p>Integrate content and language through group engagement, reader's theatre, pass the pencil, circle of friends, cube it, radio reading, shared reading and writing, plays, science projects, debates, jigsaw, group reports, choral reading, affinity diagrams, Students tackle TAKS word problems in groups and explain their answers, etc.</p>
<p>Setting objectives and providing feedback (Yields a 23 percentile gain)</p>	<p>Teachers should create specific but flexible goals, allowing some student choice. Teacher feedback should be corrective, timely, and specific to a criterion.</p>	<p>Articulating and displaying learning goals, KWL, contract learning goals, etc. Teacher can display objectives on the in-focus projector and follow-up on the mastery of the objective at the end of the lesson.</p>

Adapted from: Marzano, R., Pickering, D., Pollock, J. (2001). *Classroom Instruction that Works: Research-based Strategies for Increasing Student Achievement*. Alexandria, Va.: ASCD

High Yield Instructional Strategies	What the Research says:	How it looks in the Classroom:
<p>Generating and testing hypothesis</p> <p>(Yields a 23 percentile gain)</p>	<p>Students should generate, explain, test and defend hypotheses using both inductive and deductive strategies through problem solving, history investigation, invention, experimental inquiry, and decision making.</p>	<p>Thinking processes, constructivist practices, investigate, explore, social construction of knowledge, use of inductive and deductive reasoning, questioning the author of a book, finding other ways to solve same math problem, etc.</p>
<p>Questions, cues, and advance organizers</p> <p>(Yields a 22 percentile gain)</p>	<p>Teachers should use cues and questions that focus on what is important (rather than unusual), use ample wait time before accepting responses, eliciting inference and analysis. Advance organizers should focus on what is important and are more useful with information that is not well organized.</p>	<p>Graphic organizers, provide guiding questions before each lesson, think alouds, inferencing, predicting, drawing conclusions, skim chapters to identify key vocabulary, concepts and skills, foldables, annotating the text, etc.</p>

HIGH-YIELD INSTRUCTIONAL STRATEGIES

SIMILARITIES AND DIFFERENCES

There are four basic types of tasks that focus on identifying similarities and differences for knowledge development:

- Comparing
- Classifying
- Creating Metaphors
- Creating Analogies

Identifying similarities and differences

T-Chart

Looks like.....Sounds like
 Cause.....Effect
 Compare.....Contrast
 Pro.....Con

Identifying similarities and differences

Comparison Matrix

	Name 1	Name 2
Attribute 1		
Attribute 2		
Attribute 3		

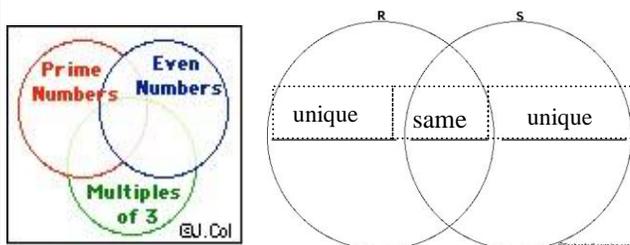

Used to show similarities and differences between two things (people, places, events, ideas, etc.).

Key frame questions:

- What things are being compared?
- How are they similar?
- How are they different?

Identifying similarities and differences

Venn Diagrams

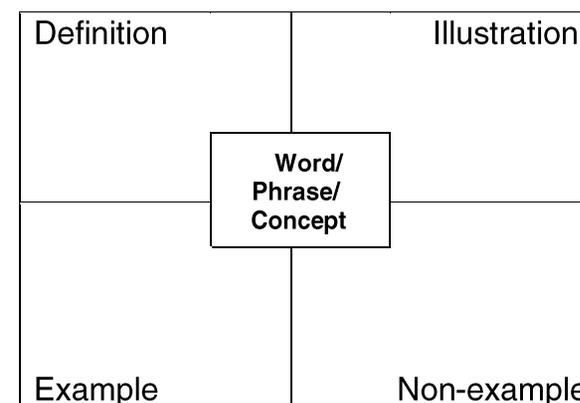

Identifying similarities and differences

Compare and Contrast Text/Character Comparison

The Life Events of:	Me, Too	Explanation

Identifying similarities and differences

Fruyer Model

Identifying similarities and differences

Cause and Effect Links

A cause is something that makes something else happen. Out of two events, it is the event that happens first. To determine the cause, ask the question "Why did it happen?"

An effect is what happens as a result of the cause. Of two related events, it's the one that happens second or last. To determine the effect, ask the question "What happened?"

At times conjunctions (connecting words) are used to link the cause and effect. Examples of common conjunctions (connecting words) are:

since
therefore
the reason for

as a result
consequently
thus
due to + noun phrase

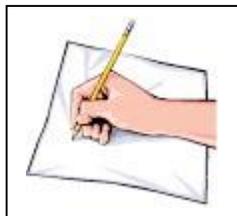

because
due to the fact
so
because of +noun phrase

the cause of
nevertheless
has led to

Identifying similarities and differences

Sketch to Stretch

1. Students listen as a story, article, or poem is read to them.
2. Students draw a picture that expresses:
 - how the story, article or poem makes them feel
 - what they think story, article or poem story means
 - what they think the author looks like
 - anything that comes to mind during the reading
3. Students explain their drawing to a partner/small group.

The class discusses the similarities/differences in their pictures.

Question/Answer/Relationships (QAR) (Also related to “Book and Brain”)

<p>“Right there” (in the text) --book ques.--</p> 	<p>“Think and Search” (text + my thinking) --book and brain--</p> 	<p>“In my head” (my thinking only) --brain ques.-- --have to infer</p> 

Identifying similarities and differences

Classifying	Comparing Frame	Creating Analogies
<div style="text-align: center;">  </div> <p style="text-align: center;"> ___ate family ___at family </p> <p style="text-align: center;"> Sort the word cards (or pictures) into the correct bucket. </p> <p style="text-align: center; color: blue;"> Identifying similarities and differences </p>	<p style="text-align: center;"> FRACTIONS and DECIMALS are similar because they both </p> <p style="text-align: center;"> _____ _____ _____ </p> <p style="text-align: center;"> FRACTIONS and DECIMALS are different because </p> <p> fractions _____, but decimals _____. fractions _____, but decimals _____. fractions _____, but decimals _____. </p> <p style="text-align: center; color: blue;"> Identifying similarities and differences </p>	<p> Analogies help us see how seemingly dissimilar things are similar, increasing our understanding of new information. </p> <p> Ex: core is to earth as nucleus is to atom. </p> <div style="background-color: #e0e0e0; padding: 5px; text-align: center;"> <p> <u>Thermometer ...is to...Temperature</u> as <u>odometer ...is to...speed</u> </p> </div> <p style="text-align: center;"> (Both measure things) </p> <p style="text-align: center; color: blue;"> Identifying similarities and differences </p>
