Data, Privacy, and Cybersecurity Conference  
August 23-24, 2022, Classic Center, Athens, GA

The Data, Privacy, and Cybersecurity Conference aims to increase knowledge of data utilization, cybersecurity best practices, technology integration, and collaboration among state, district, and school leaders.

This year’s three conference tracks follow.

- **Data Collections, Analysis, and Reporting** - This track aims to support school system personnel in understanding state data collection applications and related requirements and building capacity among school system personnel to leverage data reporting and visualization to support outcomes for students and educators.

- **Data Privacy and Cybersecurity** - This track aims to increase the awareness and capacity of effective data governance and privacy among school system personnel. This track will also promote responsible cyber hygiene practices and a forward-thinking and proactive approach to cybersecurity governance, protection, detection, and response.

- **Technology Leadership, Learning, and Development** - This track aims to support new and veteran leader growth in the field of education technology and promotes effective tools and strategies for increased student achievement and employee upskilling in the digital learning space.

The target audience for this conference includes data coordinators, technology leaders, district and school administrators, and other support staff who work to increase technology integration, privacy and security, and state and federal reporting related to funding, accountability, or education program management. The conference is a pivotal experience bringing colleagues around the state together in a collaborative, learning-rich networking opportunity.

Click the register link at the bottom of the page.

Registration closes August 5, 2022, or when capacity is met.

Are you looking for professional learning opportunities to support educator practice?

Visit the [GaDOE Professional Learning Events catalog](https://www.gadoe.org) to view upcoming virtual webinars, in-person events, on-demand content, and by-request workshop opportunities.

Featured Training of the Month

The IIS Dashboard

The Instructional Improvement System application is a data analysis tool that allows users to make custom reports using local assessments, Student Growth Percentile, state assessments, and attendance data.

Prerequisite: "Basic Administrator Dashboard Training"

Free Online Live Training Opportunities for Staff

The SLDS training team continues to provide live training on the Statewide Longitudinal Data System (SLDS). We have adapted to providing this training via an online meeting. Each session tailors the training to suit the audience in attendance and the allotted timeframe provided by the school or system-level personnel. All sessions are hands-on, so attendees should have computer access during the sessions. Once a training request arrives through email or the Training Request Form, a GaDOE trainer will reach out to the requester to discuss training options to meet the school's or system's needs.
