

# Foster Report

## Operational Dashboard

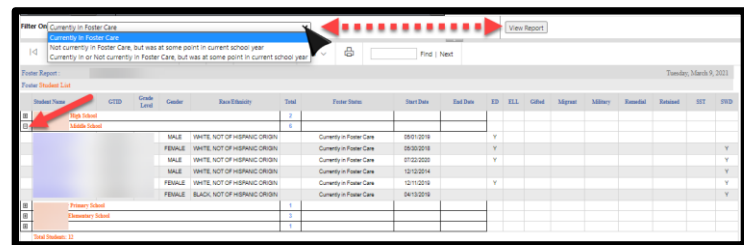

1. DFCS uploads Foster Care information regularly into SLDS. This process permits districts/schools to run the **Foster Report** to know which of their enrolled students are currently in or have been in Foster Care service during the year.

2. Click SLDS Operational, then the Foster Report tile.

3. The report **defaults** to students **Currently in Foster Care**. Choose an option from the drop and click the **View Report button** to change the category.

4. If the report is initiated at the district level, it produces a list of all the schools wherein students are reported to meet that criteria. Schools level users see the report listing their individual school only.

5. Click the **plus sign +** next to the school name to expand the data and see the list of student names, their current Foster status, and start date of service. The report also provides additional sub-groups such as ED, Gifted, SWD, etc. that the student may be part of. Click a student's name to open the **Student Profile page**. The Foster Care status is also reported in the demographics area.
