Summary

The COVID-19 pandemic and protests against systemic racism have shaken the nation in recent months. While the data presented in this report for the 2017–18 school year predated these crises, these events have further highlighted the glaring opportunity and achievement gaps in education for students of color and from various backgrounds. In addition to presenting an update to the nation on progress and challenge in increasing high school graduation rates on a path to postsecondary and workforce readiness, this report also addresses some of the gaps, barriers, and innovations seen across school systems to strengthen the nation's educational response to these crises and help prepare for those in the future. It also unveils a "Meeting the Moment" plan of action to reach national goals and to ensure that these moments of crisis are used to re-envision education and to leverage what is most important to boost academic and other outcomes for children and youth.

Since 2001, the nation has been committed to reaching a 90 percent high school graduation rate and the GradNation campaign has had a focused effort to reach that goal by the Class of 2020. Steady progress has been made toward this goal. After 30 years of stagnating graduation rates from the 1970s to the early 2000s, the country has seen 14 consecutive years of increasing graduation rates since 2004. In 2018, the nation once again reached an all-time high national graduation rate of 85.3 percent and 3.8 million more students have graduated rather than dropping out over the past 20 years.

Notably, gains in high school graduation rates have been driven by improvements among underserved students, with increases driven by Black students (12 percentage point increase since 2011), Hispanic students (10 percentage points), low-income students (9.5 percentage points), and students with disabilities (8.1 percentage points). These increases have all out-paced the national rate of increase of 6.3 percentage points and have persisted into postsecondary education, with Hispanic and Black students more than doubling their enrollment rates, and low-income students enrolling at rates that match their middle-income peers.

Still, there is crucial work to be done. The nation is currently off-pace to reach its 90 percent high school graduation rate goal, which would have required graduating an additional 174,152 students on-time in 2018. Across the nation, there remain serious gaps in providing an equal education to all students. Most students attend high schools with a graduation rate already at 90 percent or higher, but a disproportionate number of four-year non-graduates remain trapped in a subset of schools where the graduation rate is less than half that rate at only 41.8 percent. Students who are low-income, Black, Hispanic, English Learners, American Indian, experiencing homelessness, and have disabilities are all overrepresented in these schools where less than half the class graduates from high school, calling into question equal opportunity for students, regardless of race, ethnicity, socio-economic background, or other factors.

Now, more than ever is the time to commit to meeting the moment on high school graduation and redoubling our efforts to prepare students for the rigors of postsecondary education, training, and work. As such, this report lays out an in-depth Meeting the Moment plan of action that targets the remaining non-graduates, identifies critical metrics to strengthen the school to work pipeline, and provides detailed data that will allow states, in a spirit of equity, to develop locally-tailored efforts to support their students' graduations, ready for college, work, and civic life. The report also includes best practices in improving high school graduation rates and strengthening the school-to-work pipeline, highlights ongoing issues with high school accountability, and presents recommendations for policy and practice.

Part I: High School Graduation Trends Across the Nation

In 2018, the national graduation rate reached an all time high of 85.3 percent, up from 79 percent in 2011, when the Four-Year Adjusted Cohort Graduation Rate (ACGR) was first reported nationally and up from 71 percent in 2001 when the Averaged Freshmen Graduation Rate (AFGR) was used, which has closely tracked the ACGR since 2011. This marks a small increase from the 84.6 percent rate in 2017, with the nation remaining off track to reach the goal of a 90 percent graduation rate by the Class of 2020. Reaching the goal would have required graduating an additional 174,152 students across the nation on time—an achievable goal.

While annual growth has slowed, it is important to view this stagnation in the larger context of progress since 2011. Just eight years ago, no states had attained a 90 percent graduation rate, and by the 2018 graduating class, seven states had reached 90 percent. In 2011, only 9 states had graduation rates above 85 percent and by 2018, 29 states did. Encouragingly, there has been progress across all states, especially in those with the lowest graduation rates.

- Since 2011, the gap between the state with the highest graduation rate (Iowa) and that with the lowest (New Mexico) has closed from 26 percentage points to 17.5 percentage points.

- In 2011, 12 states had graduation rates below 75 percent, with 5 of those states having rates below 70 percent. By 2018, no states remained below 70 percent and all but one (New Mexico) had crossed the 75 percent graduation rate threshold.

- Of the nine states that had graduation rates above 85 percent in 2011 (Indiana, Iowa, Nebraska, New Hampshire, North Dakota, Tennessee, Texas, Vermont, and Wisconsin), only Iowa, Tennessee, and Texas had reached the 90 percent goal by 2018. None of the other four states have seen their graduation rate increase by more than 2.7 percentage points,

and one (Vermont) has experienced a decrease of 2.4 percentage points.

- The four other states that have reached the 90 percent graduation rate goal (Alabama, Kentucky, New Jersey, and West Virginia) saw their graduation rates increase by an average gain of 11 percentage points since 2011.[1]

While progress has slowed, the remaining work to reach a 90 percent graduation rate by the Class of 2020 is manageable. In 15 states, less than 1,000 additional students are needed to graduate on time to reach a 90 percent graduation rate. Yet, the challenge is more daunting elsewhere, as 5 states will each need to graduate more than 10,000 additional students.

Part II: Reaching a 90 Percent Graduation Rate for All Students

The Every Student Succeeds Act (ESSA) requires states to identify schools for comprehensive support and improvement, and continue to set goals to ensure student subgroups are making progress over time. Since ESSA's enactment, Building A Grad Nation has reported on these goals and tracked states' progress in meeting them (see Appendices N and O), and will continue to do so in order to hold states accountable in reaching not only the national 90 percent graduation rate goal, but ensuring it is done with equity. In this section, the report also examines the percent of non-graduates in each state by subgroup. With the help of these data, states can zero in on where students lack the full opportunity to succeed and provide necessary supports tailored to the needs of local populations and schools, in order to attain a 90 percent graduation rate for all students.

Where We Stand on Key Drivers
Low-Income Students
In 2018, low-income students accounted for 49.1 percent of the country's graduating cohort, but 68.5 percent of students that failed to graduate from high school on time. Promisingly, the on-time graduation rate for low-income students has increased nearly 10 percentage points over the past 8 years, rising to an all-time high of 79.5 percent in 2018. This includes a 1.2 percentage point gain from 2017. Despite this progress, however, low-income students continue to graduate at far lower rates than their more affluent peers, with a graduation gap of 11.4

percentage points. The low-income graduation gap ranges widely from state to state, from a high in Minnesota of 22.7 percentage points to South Carolina, where low-income students actually graduate at a higher rate than their non-low-income peers. Progress for low-income students has primarily been driven by a diverse group of eight states, where graduation rates have increased by 15 or more percentage points since 2011 (Alabama, Arkansas, Connecticut, Florida, Georgia, Nevada, South Carolina, and West Virginia).

Black and Hispanic Students
Progress in the national graduation rate continues to be driven mostly by increases for Black and Hispanic students across the country. From 2011 to 2018, Black and Hispanic students experienced graduation rate gains of 12 and 10 percentage points, respectively, which nearly doubles the rate of growth of white students and outpaces the national increase rate of 6.3 percentage points. Black and Hispanic students also saw graduation rates rise faster from 2017 to 2018 as well, with increases of 1.2 and 1.0 percentage points, respectively, edging out the national rate of 0.7 percentage points. Despite this progress, significant graduation rate gaps remain for both populations and they continue to comprise a disproportionate percentage of the nation's non-graduates. While Black students accounted for 15.7 percent of the graduating cohort compared to 22.4 percent of the nation's non-graduates, Hispanic students accounted for a quarter of the 2018 graduating cohort and comprised 32.3 percent of the nation's non-graduates.

Students Experiencing Homelessness
Data from the National Center for Homeless Education (NCHE) show that over 1.5 million K–12 students were identified as experiencing homelessness during the 2017–18 school year. This marks an 11 percent increase over the previous year and an all-time high (National Center for Homeless Education, 2018). Part of this increase may be due to schools and districts doing a better job identifying homeless students, which is a positive trend. Students experiencing homelessness face academic challenges that go far beyond that of stably-housed, low-income students (Ingram, Bridgeland, Reed, and Atwell, 2016). Data from 49 states showed the graduation rates of students experiencing homelessness ranged from a low of

47 percent in Minnesota to a high of 87 percent in West Virginia. While NCHE did not provide a national average graduation rate, author calculations using cohort counts from 49 states plus the District of Columbia produce an estimated national graduation rate of 67.5 percent for students experiencing homelessness. Since most states are just beginning to disaggregate graduation rates by housing status, it is expected that further improvements will be made in calculating graduation rates for students experiencing homelessness.

Students with Disabilities
For the first time in 6 years, the graduation rate for students with disabilities did not increase from 2017 to 2018, remaining at 67.1 percent nationally. A graduation rate gap of 20.7 percentage points between students with disabilities and their peers without special needs emphasizes the inequitable educational outcomes that they face. This gap varies across states, ranging from 5.2 percentage points in Arkansas and 8.3 in Kansas to 50.7 percentage points in Mississippi and 36.5 in Ohio. Students with disabilities make up an increasing percentage of students who fail to graduate on time. In 2017–18, the rate increased 1.8 percentage points to 27 percent, despite comprising only 12.1 percent of the total 2018 cohort.

English Learners
The percentage of K–12 public school students in the United States that were English Learners (ELs) increased from 8.1 percent (3.8 million students) in the fall of 2000 to 9.6 percent (4.9 million students) in the fall 2016, representing an increase of more than one million students.[2] Encouragingly, after a slight decrease in 2016–17, English Learners' graduation rate increased 1.9 percentage points to 68.3 percent in 2017–18. Still, EL students have the third lowest graduation rate of any subgroup of their peers, slightly higher than students with disabilities and students experiencing homelessness. English Learners are not only becoming a larger part of the population, they are also disproportionately comprising more of the nation's non-graduates. In 2017–18, English Learners represented 14.9 percent of all students who failed to graduate in four years (a 1.2 percent increase from 2016–17), but comprised just 6.9 percent of the cohort.

Low-Graduation-Rate High Schools
By 2018, there were 2,062 low-graduation-rate high schools (schools enrolling more than 100

---

1. Past questions have been raised about the validity of Alabama's graduation rate following an internal audit and U.S. Department of Education investigation that found the state's 2015 graduation rates had been improperly calculated, leading to an inflation of the reported rate.
2. NOTE: Data comparisons between the total number of ELs enrolled in public schools and the percentage of public schools students prior to the 2014–15 school year must be done with caution. Previously, this data only included students who participated in EL programming. Beginning in 2015, however, calculations were changed to include all EL students, regardless of program participation.

students with a graduation rate at or below 67 percent), down from 2,357 in 2017 and 2,425 in 2016. These schools accounted for 11 percent of all high schools and enrolled only 7 percent of the 2018 cohort, but educated approximately 28 percent of all four-year non-graduates. The overall graduation rate for students across all low-graduation-rate high schools was 41.8 percent.

Low-income, Black, and Hispanic students disproportionately attend low-graduation-rate high schools. While low-income students accounted for 44.5 percent of students nationwide, they comprised nearly 57 percent of the students in low-graduation-rate high schools. Similarly, Hispanic students were about one-fourth of all students in public high schools with 100 or more students in the 2017–18 school, but over 31 percent of students in low-graduation high schools. Black students were similarly over-represented, with 26.7 percent of students in such schools even though they represent only 15.2 percent of all students. Conversely, white students were just under 50 percent of high school students, but less than one-third of the students attending low-graduation-rate high schools. This report also breaks down low-graduation-rate high schools by alternative or regular high schools; district- or charter-operated; and virtual schools (see Table 14).

Part III: Meeting the Moment Plan

A 'Meeting the Moment' plan was created to target the high schools where most of the non-graduates in America are found and ensuring states, districts, and schools are serious about on-time completion *with* systems that not only facilitate high school graduation, but also college and career readiness. For the first time, this report drills a level deeper, targeting exactly where the dropout challenge remains, the barriers to successful transitions to postsecondary education, and what can be done to reach the nation's goals with greater equity.

Where the Dropout Challenge Remains

Most of the remaining non-graduates are highly concentrated:

- **The top 5 states with the highest number of non-graduates have 37 percent of the nation's non-graduates**, the top 10 states have 56 percent, and the top 20 have 77 percent.

- At the district level, **half of all on-time non-graduates are found in just 4 percent of school districts**, while at the school level, 28 percent of all non-graduates are found in low-graduation-

rate high schools with 100 or more students. These schools have a graduation rate of only 41.8 percent.

- The remaining non-graduates are spread widely across the country with one-third of them distributed across 35 states and 12,000 school districts.

The Meeting the Moment plan focuses on the smallest subset of states, districts, and high schools in which the 90 percent graduation rate goal could be realistically met if the number of non-graduates were cut in half.

- The Plan identifies **22 states for accelerated action—19 states with some of the highest numbers of non-graduates**, plus an **additional three states** with graduation rates below the national average.

- Distilling the data further, **half of the non-graduates in these states are found in just 452 school districts and 887 high schools**.

Zeroing in on the most concentrated areas in this way allows effective, evidence-based interventions to have the greatest leverage and improve outcomes for the most students.

Every Diploma Counts: High School to College and Career Readiness

To ensure quality, the Meeting the Moment plan examines key indicators and outcomes across the targeted states to understand current successes, challenges, and where more work is needed to ensure that increasing high school graduation rates translates into college and career readiness. The metrics examined are: the Secondary School Improvement (SSI) Index developed in last year's *Building a Grad Nation* report and updated this year; college and career readiness indicators and graduation rate goals in state ESSA plans; state graduation rate goals; the use of Early Warning Systems (EWS); the extent to which a state's students are impacted by Adverse Childhood Experiences (ACEs) and poverty; the rate of youth disconnection from school and the workplace; and the alignment between requirements for high school graduation and college admissions in the targeted states.

- **The Secondary School Improvement (SSI) Index**—which measures progress on the percent of students scoring proficient in Reading and Mathematics on the 8th grade National Assessment of Education Progress (NAEP) exams, the percent who score a 3 or higher on Advanced Placement (AP) tests, and the percent that graduate on time within four years—**shows that 14 of the 22 targeted**

states made improvements of at least one percentage point across at least three of the four indicators, with six states improving on all four indicators. Six of the remaining eight states increased on two of the four indicators, while just Arizona and Oklahoma struggled to improve more than one indicator.

- Reviewing state ESSA plans indicated that while there has been progress, a great deal of work remains to strengthen the relationship between high school, college, and career. **Most, but not all, of the 22 states targeted in the Meeting the Moment plan measure chronic absenteeism, advanced coursework, and career and technical education.** Florida, Louisiana, Mississippi, and Pennsylvania do not measure advanced coursework, while Minnesota, Nevada, and Oregon do not measure career and technical education. Notably, **only three states measure the college enrollment of high school graduates;** eight states measure placement tests; two states measure 9th grade students who are on-track; and three states measure a well-rounded education.

- **Seventeen of the targeted 22 states have established a high school graduation rate goal of 90 percent or higher, but most of their timeframes extend beyond 2020**, with some even pushing past 2030.

- While some evidence of the existence of early warning indicator data can be found in nearly all of the targeted states, often times there is a gap between state systems' potential data use and schools effectively employing Early Warning Systems on the ground. Data from the U.S. Department of Education show that **only half of all high school principals report the existence of Early Warning Indicator data or systems in their schools** and those who report using them regularly is considerably less (U.S. Department of Education, 2016).

- **In 16 of the 22 targeted states, 20 percent of students under age 17 encounter 2 or more ACEs** and 13 out of the 22 have 20 percent or more of their students aged 5–17 living in poverty (Appendix S).

- In 2018, the most recent year available, **11.2 percent of all 16 to 24 year-olds in the United States were disconnected from both school and work.** In total, 11 of the 22 targeted states had rates of youth disconnection above the national average (Appendix T).

- **Remarkably, most of the targeted states, and most of all states, do not have alignment between what is required for high school**

graduation and admission to the state's flagship university systems. Only three states of the 22 examined have high school requirements for diplomas that match the college admissions requirements of state university systems, while one other state required the correct amount of credits in high school, but students are not required to choose this sequencing.

While the Meeting the Moment plan is focused on a subset of states, all states—including those close to reaching the 90 percent graduation rate threshold—must take this moment to redouble their efforts to ensure more students are graduating high school and doing so more equitably across student subgroups. This plan also examines 15 states beyond the 22 targeted states that have to graduate only 1,000 students or less to cross the 90 percent graduation rate goal.

Policy and Practice Recommendations

Align diploma requirements with college- and career-ready standards

Our analysis shows that graduating high school after completing the required courses for admission into a state's university system is a strong predictor of postsecondary success. It is alarming, however, that we found misalignment between high school graduation requirements and college admissions requirements of state university systems in nearly *all* states. It is critical for state leaders to certify that high school diploma requirements are aligned with state college and university systems' admissions criteria to ensure students on track to graduate do so prepared to enter postsecondary or career pathways. Schools and districts should cooperate to ensure more students, especially those from traditionally underserved populations, earn a college- and career-ready diploma.

Create state-specific high school graduation plans

States should develop "Meeting the Moment" State Action Plans, that analyze which districts, schools, and student subgroups within the state need additional support to ensure students graduate on-time and college- and career-ready equitably. This can be done using data on the equity path to 90 for all states in this report (see Appendix H). These plans will allow states to identify students in need of critical interventions and help districts and schools be better equipped to implement effective interventions. The GradNation campaign will be

working with States on the Meeting the Moment Action Plans in the coming year.

Monitor the impacts of COVID-19 to address education gaps exposed by the pandemic

The full impact of the COVID-19 crisis is still unfolding. Just as the country has organized comprehensive reviews to address the health and economic crises, the nation should also be conducting a review of the education system to address the many equity gaps that have been further exposed by COVID-19. Policymakers and practitioners must continue to closely monitor its impact on student learning, including access to the internet for virtual learning, supports for the added trauma for youth in the aftermath of the pandemic, access to college counseling, and postsecondary preparedness. In addition, it will be essential to tailor policies and practices to support the most vulnerable students as schools reopen in the Fall of 2020 or beyond, including, but not limited to, mental health and basic needs supports.

Further examine credit recovery programs

Credit recovery has been a target of recent skepticism about high school graduation rate gaming. It is difficult to measure this, however, because few rigorous studies have been done on the quality and effectiveness of credit recovery courses. Without data, we cannot understand the impact of these programs. It is therefore essential that credit recovery is further examined to uncover what type of students enroll, how many courses are taken on average, the percentage of total credits earned by students from credit recovery courses, which courses are predominately taken as credit recovery, and the degree to which they are enabling students to learn course content and graduate with a legitimate diploma prepared to succeed in postsecondary education. Members of the GradNation campaign will be studying credit recovery more deeply in the coming year and will issue findings in a forthcoming report.

Strengthen the transition from high school to postsecondary and careers

The transition from high school into postsecondary education and careers is challenging for students. Education leaders in K–12 can ease this transition by providing students with the resources they need to understand their postsecondary options, the application process, financial aid, and the course requirements for their chosen pathways. Leaders can also support students in other ways, such as

increased access to dual enrollment, early college career academies, and career and technical education coursework. Postsecondary institutions must support more students, especially first generation and low-income students, before they step onto campus and while they are enrolled. Additionally, it is critical to the increasing number of low-income students who attend postsecondary institutions that financial aid is navigable and substantial enough to cover basic needs like food and housing.

Expand the Use of Early Warning Systems

Early Warning Systems are one of the most effective means districts can use to increase their graduation rates in their high schools. Research has identified attendance, behavior, and course performance—the "ABCs"—as powerful predictors of high school completion (Bruce et al., 2011). Course performance in Grade 9, in particular, was shown to correlate strongly with high school graduation (Allensworth and Easton 2005). The systematic use of early warning or on-track to graduation systems has been credited, for example, with the substantial rise in graduation and college readiness rates in Chicago, and throughout the State of West Virginia. Early Warning Systems provide teams of teachers, counselors, and nonprofit student support partners with real time data to signal which students (absent effective intervention) have high odds of not graduating, along with protocols and procedures to identify and implement interventions with the highest odds of success. This allows schools to target the right intervention at the right time to the right student.

Although the idea of Early Warning Systems has become widely disseminated, their effective implementation has not. Half the nation's high schools report they do not have access to early warning indicator data, and even fewer report effective use of early warning systems (U.S. Department of Education, 2016).

Expand Capacity of Evidence-Based Nonprofits

Schools cannot face the dropout challenge alone. For decades, community-based nonprofits have provided additional capacity to schools to support students and teachers, boost student achievement and graduation, and create stronger pathways from school to work. Public and private funding should flow to nonprofits that have the most capacity to meet the needs of schools and districts, and that have the strongest evidence of success increasing high school graduation rates and student achievement.

Introduction

Now, more than ever, is the time to commit to meeting the moment on high school graduation and redoubling our efforts to prepare students for the rigors of postsecondary education, training, and work.

The nation has been committed to reaching a 90 percent graduation rate equitably for nearly 20 years. In 2010, the GradNation campaign launched a focused effort to reach that goal by the Class of 2020.

Steady progress has been made toward this goal. After 30 years of stagnating graduation rates, the country has seen 14 consecutive years of increasing graduation rates since 2004. In 2018, the nation once again reached an all-time high national graduation rate of 85.3 percent and 3.8 million more students have graduated rather than dropping out since the turn of the century. These additional graduates produce benefits to the nation's economy, health, and civic society and position themselves to pursue the American dream.

Notably, gains have been driven by improvements among underserved students, with Black, Hispanic, low-income, and students with disabilities all out-pacing the national rate of increase. These improvements have persisted into postsecondary education, with Hispanic and Black students more than doubling their enrollment rates, and low-income students enrolling at rates that match their middle-income peers.

This progress is in part possible thanks to advances in research around what works to educate and support all students. Early Warning Systems have effectively begun tracking a student's attendance patterns, behavior, and course performance to identify and support students who signal the need for extra help before they drop out or fall off-track to graduation. Whole child approaches grounded in the evidence that social and emotional learning impacts a wide range of important student outcomes continue to expand. Research from the Science of Learning and Development Alliance is improving schools' abilities to maximize the impacts of classroom instruction and move from a one-size fits all approach towards more personalized and equitable learning environments. Many schools, districts, and states have set graduation rate goals, strengthened data collection and reporting, identified the students in need of additional supports, partnered with community-based nonprofits to provide such supports, worked to increase the relevance of school to career interests of the students, increased early college high school, dual enrollment, AP courses, and other ways to increase the connection between high school and college, and invested in educators and school leaders.

Still, there is crucial work to be done. Across the nation, most students attend high schools with a graduation rate already at 90 percent or higher, but a disproportionate number of four-year non-graduates remain trapped in a subset of schools where the graduation rate is only 41.8 percent. Low-income, Black, Hispanic, English Learners, American Indian, and students experiencing homelessness and students with disabilities are all overrepresented in these schools, calling into question equal opportunity for students, regardless of race, socio-economic background, or any other challenge they may face.

Now, more than ever is the time to commit to meeting the moment on high school graduation and redoubling our efforts to prepare students for the rigors of postsecondary education, training, and work. As such, this report lays out an in-depth "Meeting the Moment" plan that targets the remaining non-graduates, identifies critical metrics to strengthen the school to work pipeline, and provides detailed data that will allow states to develop locally-tailored efforts to support their students to graduate, ready for college, work, and civic life.

This report is broken down into three sections:

1. **High school graduation trends across the nation:** examining the progress states have made since 2011 (the first year in which the Four-Year Adjusted Cohort Graduation Rate was put into effect across the nation)

and the highly achievable gains that are necessary to reach the 90 percent graduation rate goal;

2. **Reaching a 90 percent graduation for all students:** highlighting both continued improvement for historically underserved student subgroups and the equity gaps that linger, and focusing on the remaining lowest performing schools by state; and

3. **Meeting the moment to reach the graduation rate goal:** a detailed plan of action to reach the remaining vulnerable students in the most highly concentrated areas where effective efforts will have the greatest leverage and impact.

The report also includes best practices in improving high school graduation rates and strengthening the school-to-work pipeline, highlights ongoing issues with high school accountability, and presents recommendations for policy and practice. Although this update to the nation is based on data from the 2017–18 school year that preceded the COVID-19

pandemic and protests against systemic racism, we also address some of the gaps, barriers, and innovations we are seeing across school systems to strengthen our nation's educational response to crisis now and in the future.

Education in a Time of National Crisis

There is great uncertainty rippling through the world. As local and state economies are severely affected by the global pandemic, and predictions for a return to normalcy vary, much is unknown about what the future holds. What is clear is that the COVID-19 pandemic has reshaped education in this country for the Class of 2020 and beyond.

The current public health crisis forced school closures in all 50 states, with more uncertainty on the horizon due to the novel coronavirus and its impact on physical gathering. These closings are stretching into the 2020–21 school year and beyond in some places hit particularly hard by the virus. Even as some schools

reopen in the Fall of 2020, without a reliable vaccine, possible sporadic outbreaks may force future school closings, not to mention the apprehension from fearful parents, students, and educators afraid to risk catching the virus. With this in mind, states, districts, and schools must not only respond to immediate needs, but also be as prepared as possible for the future. Policymakers and educators must be ready for the eventual return to school, regardless of when that occurs. Yet, most districts currently lack plans if the crisis continues into the fall and winter (EdWeek, 2020).

The unpredictability of COVID-19 led to piecemeal responses throughout the country. The immediate response was a shift to distance learning, but this presents several concerns, chief among them equity, quality, and privacy.

While some areas of the country were able to quickly establish distance learning procedures for all their students in early March 2020 when the outbreak was first spreading across America, students in other districts went weeks without instruction or teacher interaction, and, in some cases, months before students had access to

planned lessons. The most recent data from the U.S. Census Bureau showed 9.4 million children between the ages of 3 and 18 do not have access to internet, while 17 percent live in households without a laptop or desktop computer. Another recent analysis by the Alliance for Excellent education with the National Indian Education Association, the National Urban League, and UnidosUS found that 16.9 million children do not have high-speed internet at home and 7.3 million do not have a desktop, laptop, or tablet (Alliance for Excellent Education et al., 2020). This lack of access disproportionately impacts students of color, especially American Indian and Alaska Native students. In addition, a recent survey found that leaders in high-poverty districts were much more likely to say students' lack of access to technology is a major challenge to teaching during Coronavirus-related closures (Herold, 2020).

Special attention must be paid to particularly vulnerable populations, including low-income students and students experiencing homelessness. A survey conducted by SchoolHouse Connection during the early days of the COVID-19 pandemic showed that 'mobile hotspots/funds for internet access' and 'devices and technology' were among the most pressing needs of students experiencing homelessness in K–12 and postsecondary education (Opportunities for Impact, 2020). Some districts report an inability to locate some of their students, especially those that lack stable housing. To help students that rely on the federal free and reduced-price lunch program, districts have set up pick-up locations where students, and in some cases whole families, can come to retrieve meals for the week. Others have begun utilizing bus routes to provide school meals. McKinney-Vento homeless liaisons in some districts like San Antonio ISD and Nashville have called their students to understand their current situation and provide resources. Some districts have resorted to using social media to communicate with students and families.

There are similar concerns for students with disabilities and English Learners who would typically receive more attention in school than is possible through distance learning. Schools and districts must also do everything they can to ensure students with disabilities are getting the individualized attention and instruction they need, and that materials and lesson plans are available in multiple languages for English Learners.

Private and public organizations have stepped up to bridge this digital divide. Companies like Google have handed out Chromebooks for students without them, while telecommunications companies have moved to provide free internet access for low-income students. Some school districts, like Charleston County, even took to sending Wi-Fi-enabled buses throughout the community so students may access the internet.

In addition to equity concerns, educators have raised alarms regarding privacy across video and online services, showing that access to digital learning does not guarantee a quality education. Educators and policymakers must weigh these concerns when developing digital learning lessons to ensure system safety and follow the evidence of what works. To aid in this, the U.S. Department of Education launched an online research hub that brings together studies that evaluate the effectiveness of specific distance learning practices or products on student outcomes, as well as a resource page for schools and school personnel.

Closures and digital learning will undoubtedly have a significant impact on the graduation rate for the Class of 2020, the seminal year for the GradNation campaign. More than 30 states officially offered flexibility for graduation requirements for the Class of 2020. This often consisted of waiving various graduation requirements, including certain mandated courses, end-of-course examinations, and minimum attendance hours. In many cases, states empowered districts to decide whether students have met the requirements for graduation.

These policies will serve to make graduation rates unreliable. Beyond the validity of data, the ramifications of these changes will also bear close monitoring in the years to come to understand the impacts this has on postsecondary and career readiness for the graduating Class of 2020, but also for those students currently enrolled in postsecondary institutions. Some educators have expressed concern that the traditional supports students have as they transition from high school and into postsecondary education are at risk. College closures may also disproportionately impact the millions of low-income students forced to return home, who are tasked not only with learning, but also helping to support their families struggling to make ends meet. In addition, surveys show COVID-19 has caused low-income students to re-evaluate whether

they will attend college in the fall at all (Art & Science Group, 2020).

Once students are finally able to return to school, educators must be prepared to handle the trauma that enters the school with them. This will be a time when social and emotional learning and trauma-informed practices are even more crucial to be fully embedded into curricula, not an item to cut in a future mired by potential budget cuts or constraints. A recent survey by America's Promise Alliance found that despite one-quarter of students feeling disconnected and over half of students feeling more worried than usual about their health and their family's health, 40 percent have not been offered social-emotional support by an adult or their school (Margolius, Doyle Lynch, Pufall Jones, and Hynes, 2020). States, districts, and schools must still work to provide students with a complete education, one that continues to nourish students academically but also socially, physically, and creatively.

Organizations like the Collaborative for Academic, Social, and Emotional Learning (CASEL) and the Learning Policy Institute have worked to produce timely resources to help schools navigate COVID-19 impacts. What remains unknown, however, is school and district capacity to access and employ this information given disjointed national response efforts.

The effect of the current predicament will require close monitoring for years to come. Data is already emerging that shows the impact COVID-19 may have on student learning. One study found that the average student could lose as much as one-third of the expected progress in Reading and half of the expected progress in Math from the previous year (Kuhfield et al., 2020). Other research has already illustrated that Black, Hispanic, and low-income students are at risk of even greater learning losses (Chetty, Henron, and Stepner, 2020; Dorn, Hancock, Sarakatsannis, & Viruleg, 2020).

We must continue to analyze all available data to understand COVID-19's full impact. As the nation reviews the response of the health system and identifies ways for the economy to recover, it must also conduct a national review of our education system in times of crisis (See EdWeek). In this moment, we must also do everything possible to provide students across America with a quality education and the supports they need, educationally, mentally, and physically to be able to come out of this crisis prepared for future success.

High School Graduation Trends
Across the Nation

In 2018, the national graduation rate once again reached an all-time high of 85.3 percent, up from 79 percent in 2011, when the Four-Year Adjusted Cohort Graduation Rate (ACGR) was first reported nationally.

The National Picture

In 2018, the national graduation rate once again reached an all-time high of 85.3 percent, up from 79 percent in 2011, when the Four-Year Adjusted Cohort Graduation Rate (ACGR) was first reported nationally and up from 71 percent in 2001 when the Averaged Freshmen Graduation Rate (AFGR) was used. This marks a small increase from the 84.6 percent rate in 2017, with the nation remaining off track to reach the goal of a 90 percent graduation rate by the Class of 2020. Reaching the goal would have required graduating an additional 174,152 students across the nation on time.

In order to ensure the path to a 90 percent graduation rate is one of equity, it would also require the majority of the additional graduates to come from traditional underserved student subgroups, including Black, Hispanic, and low-income students, as well as students with disabilities and those experiencing homelessness.

Encouragingly, Black, Hispanic, and low-income students have driven gains in graduation rates since 2011, with such rates rising from 67 percent to 79 percent for Black students, 71 percent to 81 percent for Hispanic students, and 70 percent to 79.5 percent for low-income students.

State-Level Progress and Challenge

Reviewing state-level data shows disparate outcomes across the nation. While some states have made tremendous progress toward the 90 percent goal, others have stagnated in recent years, or even experienced backsliding. Yet, the success of high-poverty states, including West Virginia, which crossed the 90 percent graduation rate threshold for the first time in 2018, serves as a challenge to other states to reach the 90 percent goal. As of 2018, seven states—Alabama, Iowa, Kentucky, New Jersey, Tennessee, Texas, and

Figure 1 • Averaged Freshman Graduation Rate (AFGR) and Four-Year Adjusted Cohort Graduation Rate (ACGR), by State, 2002–2018

West Virginia—reached a 90 percent graduation rate, up from only two states in 2017. An additional 8 states remained within 2 percentage points, while 29 states in all had surpassed 85 percent. New Mexico remained the only state with a graduation rate below 75 percent.

Seven-Year Trends

While annual growth has slowed, it is important to view this stagnation in the larger context of progress since 2011. Just 8 years ago, no states had attained a 90 percent graduation rate, and only 9 states had graduation rates above 85 percent. Encouragingly, there has been progress across all states, especially in those with the lowest graduation rates. Since 2011, the gap between the state with the highest graduation rate (Iowa) and that with the lowest (New Mexico) has shrunk from 25 percentage points to 17.5 percentage points.

In total, 26 states have made graduation rate gains of 5 percentage points or more over the

past 7 years, including 11 states with gains of more than 10 percentage points. Two groups of 11 states have seen graduation rate increases of 3 to 5 percentage points and 1 to 3 percentage points, respectively. Importantly, only two states—Oklahoma and Vermont—experienced backsliding since 2013.

- In 2011, 12 states had graduation rates below 75 percent, 5 of those states with rates below 70 percent. By 2018, no states remained below 70 percent and all but one had crossed the 75 percent graduation rate threshold.

- Of the seven states that had graduation rates above 85 percent in 2011 (Indiana, Iowa, Nebraska, New Hampshire, North Dakota, Tennessee, Texas, Vermont, and Wisconsin), only Iowa, Tennessee, and Texas have reached the 90 percent goal. None of the other 4 states have seen their graduation rate increase by more than 2.7 percentage points, and one (Vermont) has experienced a decrease of 2.4 percentage points.

- The 4 other states that have reached the 90 percent graduation rate goal (Alabama, Kentucky, New Jersey, and West Virginia) saw their graduation rates increase by an average gain of 11 percentage points since 2011.[3]

While progress has slowed, the remaining work to reach a 90 percent graduation rate by the Class of 2020 is manageable. In 15 states, less than 1,000 additional students needed to graduate on time to reach a 90 percent graduation. Yet, the challenge is more daunting elsewhere, as 5 states will need to graduate more than 10,000 additional students. This report provides an in-depth breakdown by state and subgroup of the additional graduates needed to reach 90 percent (See Appendix H).

Now is the time for states to develop action plans that address the specific challenges they face, redouble their efforts to ensure all students receive the supports needed to graduate college or career ready, and meet the moment of reaching a 90 percent graduation rate equitably.

3. Past questions have been raised about the validity of Alabama's graduation rate following an internal audit and U.S. Department of Education investigation that found the state's 2015 graduation rates had been improperly calculated, leading to an inflation of the reported rate.

Table 3 • Estimated Number of Additional Graduates Needed to Reach a 90 Percent Adjusted Cohort Graduation Rate (ACGR) by State and Subgroup, 2017–18

Cohort Year	All Students (N)	American Indian/ Alaska Native (N)	Asian/Pacific Islander (N)	Black (N)	Hispanic (N)	White (N)	Two or More Identities (N)	Students with Disabilities (N)	Low-Income (N)	Limited English Proficiency (N)
2016–17	174,152	6,725	–	64,012	83,419	16,591		103,112	191,145	55,104

Note. † = Not applicable: Data are not expected to be reported by the SEA for SY2016–17. The number of additional graduates needed to reach 90 percent graduation rate(s) for all students and each subgroup was calculated using the aggregated 2016–17 state level ACGR file (i.e., for the state level cohort sizes) and the 2016–17 graduation rates. The Asian/Pacific Islander column represents either the value reported by the state to the Department of Education for the major racial and ethnic group "Asian/Pacific Islander" or an aggregation of values reported by the state for the major racial and ethnic groups "Asian," "Native Hawaiian/Other Pacific Islander or Pacific Islander," and "Filipino." (California is the only state currently using the major racial and ethnic group "Filipino.")

Race & Education in America

The nation is finally reawakening to the reality of racial injustice in this country. The latest examples of police brutality against Black Americans have ignited protests and demonstrations across the country. These protests have brought a sustained attention to systemic inequities in the United States rarely seen before.

Each year, this report calls attention to equity gaps, including those between white students and their Black and Hispanic peers. As this report shows, Black students graduate at rates 10.1 percentage points below their white peers, while the Hispanic-white student gap is 8.1 percentage points. The current moment, however, calls on us to not just report on the data, but also confront the role systemic racism plays in creating educational inequities that perpetuate racial oppression.

Research shows Black and Hispanic students are more likely to live in neighborhoods of concentrated poverty and disproportionately likely to have adverse childhood experiences (Bethell et al, 2017). Regardless of where these experiences take place, they seep into the schoolhouse, and data shows that adverse childhood experiences have a significant impact on academic performance, behavior, and health (Jimenez, Wade, Lin, Morrow, and Reichman 2016).

Across the board, every metric of student discipline indicates a system that unduly targets and impacts Black students. Data from the 2015–16 Civil Rights Data Collection show that while Black students made up just 15.4 percent of student enrollment, they accounted for over 36 percent of school arrests. They also are involved in a disproportionate percent of instances where physical restraint is used, as well as are over-represented in the percent of students expelled due to zero tolerance policies. These disciplinary actions result in Black students accounting for nearly 45 percent of all school days missed due to expulsion (U.S. Department of Education, 2018).

Students of color also have less opportunities at the high school level. Black and Hispanic students are underrepresented in rigorous coursework, including AP courses and Gifted and Talented Education (GATE), as seen in Table 4. Schools with high Black and Hispanic populations are also much less likely than schools with low Black and Hispanic populations to offer high-level math and science courses, including Algebra II, Calculus, Chemistry, and Physics. This is particularly troublesome as research indicates rigorous course-taking is one of the two strongest indicators for college success (Balfanz et al., 2016), leaving a disproportionate number of Black and Hispanic students unprepared for postsecondary success. This is reflected in the high proportions of Black and Hispanic students enrolling in remedial coursework and taking more remedial courses on average (Chen, 2016). These factors partially help to explain persistent equity gaps in postsecondary attainment, as just 32 percent of Black and 25 percent of Hispanic adults have postsecondary credentials of some kind, compared to 48 percent of white Americans (Lumina, 2019).

Make no mistake, these gaps are the results of institutional racism. For decades, education in America was ruled by the law of "separate but equal." A unanimous U.S. Supreme Court decision in *Brown v. Board of Education* and the Civil Rights Act that followed a decade later were designed to end de jure and de facto educational segregation. Yet, research shows that this has not been the case, as schools in the south remain as segregated as they were in the 1960's and recent data indicate that nearly 7 in 10 Black children attend majority non-white schools (Orfield & Frankenberg, 2014; Garcia, 2020).

America's long history of residential and school segregation, combined with school funding formulas relying primarily on local property taxes, has resulted in non-white school districts receiving far less funding than their white counterparts. Data show that predominately non-white school districts (districts where 75 percent or more of students are non-white) receive $2,226 less per pupil in funding than white school districts (EdBuild, 2019). Lower funding levels means these schools have less resources available for their students and contribute to lower achievement and graduation rates. In addition to equity gaps between Black and Hispanic students and their white peers, this report shows that Black and Hispanic students make up the majority of students that attend high schools with graduation rates below 67 percent.

The nation has made great progress toward its goal of a 90 percent graduation rate, much of which has been driven by Black and Hispanic students. Yet, persistent gaps continue to hold America back from fulfilling its promise as the land of equal opportunity for all. This is why the final five percentage points needed to cross the 90 percent threshold is an equity mandate. Now is the time to answer the call and work to create a more just and equitable educational system.

Table 4 • Student Subgroup Representation in AP Courses, 2016

	Percent of Public School Students	Percent of AP Test-Takers	Percent of Students in GATE
White	48.9%	55.6%	58.8%
Black	15.4%	8.7%	8.5%
Hispanic	25.8%	20.3%	18.1%

Reaching a 90 Percent
Graduation Rate for All Students

To better target interventions to help states reach a 90 percent graduation rate equitably, it is essential to understand what subgroups are over-represented in the cohort of students that fail to graduate high school on time each year.

A 90 percent national graduation rate is a hollow achievement if it is not reached equitably with traditionally underserved students leading the way and with quality that prepares students for postsecondary education and the workforce. That is why, since 2015, the GradNation campaign has focused intensely on student subgroups, geographic locales, and school types that are most in need of support and intervention, as well as better understanding key opportunities and challenges in the school to work pipeline. This includes low-income, Black, and Hispanic students, as well as students with disabilities, those experiencing homelessness, and English Learners.

Thanks to the Every Student Succeeds Act (ESSA), states are now required to identify schools for comprehensive support and improvement and continue to set goals to ensure student subgroups are making progress over time. Since ESSA's enactment, this report has reported on these goals and tracked states' progress in meeting them (see Appendices N and O), and will continue to do so in order to hold states accountable in reaching not only the national 90 percent graduation rate goal, but ensuring it is done with equity.

In this section, the report also examines the percent of non-graduates in each state by subgroup. To better target interventions to help states reach a 90 percent graduation rate equitably, it is essential to understand what subgroups are over-represented in the cohort of students that fail to graduate high school on time each year.

With the help of this data, states can zero in on where students are falling behind and target supports, resources, policy, and practice changes to locales and schools where they are most needed in order to attain a 90 percent graduation rate for all.

Where We Stand: Low-Income Students

In 2018, low-income students accounted for 49.1 percent of the country's graduating cohort, but 68.5 percent of students that failed to graduate from high school on time. This highlights the need to increase outcomes for low-income students if the nation is going to reach the 2020 goal.

Encouragingly, low-income students' on-time graduation rate has increased nearly 10 percentage points over the past 8 years, rising to an all-time high of 79.5 percent in 2018. This includes a 1.2 percentage point gain from 2017. Looking across states offers an even more hopeful glimpse, as in 2011, just 2 states graduated more than 80 percent of their low-income students. By 2018, that number had increased to 17 states, while 4 states (Arkansas, Kentucky, Texas, and West Virginia) had climbed above an 85 percent graduation rate for low-income students. Meanwhile, just one state—New Mexico—continues to lag below a 70 percent graduation rate for low-income students.

Progress for low-income students has primarily been driven by a diverse group of 8 states, where graduation rates have increased by 15 or more percentage points since 2011. This group ranges from New England states like Connecticut to southern states like Georgia, illustrating that with the proper evidence-based reforms, practices and supports, progress can occur.

Despite this progress, however, low-income students continue to graduate at far lower rates than their more affluent peers, with a graduation gap of 11.4 percentage points. The low-income graduation gap ranges widely from state-to-state, from a high in Minnesota of 22.7 percentage points to South Carolina, where low-income students actually graduate at a higher rate than their non-low-income peers by 4.1 percentage points. Generally, Midwestern states are among those with the highest graduation rate gaps for low-income students.

South Carolina's progress for low-income students may in part stem from commitments

Table 5 • States with the Largest Graduation Gap Between Low-Income and Non-Low-Income Students, 2018

State	Low-Income 2018 ACGR (%)	Gap between Non-Low-Income and Low-Income ACGR (Percentage Points), 2018	Percent of Low-Income Students in the Cohort, 2018

Figure 3 • Adjusted Cohort Graduation Rate (ACGR) for Black, Hispanic/Latino, and White Students from 2010–11 to 2017–18
Source: National Center for Education Statistics (NCES). Retrieved from http://www.ed.gov/news/press-releases/achievement-gap-narrows-high-school-graduation-rates-minority-students-improve-faster-rest-nation

by the state's Superintendent of Education and Governor to an equitable education. In 2015, the South Carolina Department of Education passed the State Plan for Equitable Access to Excellent Educators, aimed at strengthening and maintaining educator effectiveness, especially in high-needs schools. The previous and current Governor both ran on platforms for education reform and access to education, respectively. This highlights the important role state leadership has in increasing high school graduation rates around the country.

The states with the highest proportion of non-graduates are a diverse group, ranging from rural, low-population states like West Virginia, to California, which is home to the largest population of high school students in the country. Furthermore, the states with the largest gap between the percent of non-graduates that are low-income and percent of low-income students within the overall cohort are diverse as well: the gap in Maine is 29 percent and the gap is over 30 percent in Iowa and Kansas (see Table 6).

In 7 states, more than 8 out of every 10 students that failed to graduate on time were low-income, and more than two-thirds of 33 states' non-graduates were low-income in 2018. The diversity of states with large proportions of low-income non-graduates illustrates the importance of understanding each state's specific challenges in reaching a 90 percent graduation rate and tailoring policies to fit their circumstances.

Where We Stand: Black and Hispanic Students

Progress in the national graduation rate continues to be driven mostly by increases for Black and Hispanic students across the country. From 2011 to 2018, Black and Hispanic students experienced graduation rate gains of 12 and 10 percentage points, respectively, which nearly doubles the rate of growth of white students and outpaces the national increase of 6.3 percentage points. Black and Hispanic students also saw graduation rates rise faster from 2017 to 2018 as well, with increases of 1.2 and 1.0 percentage points, respectively, edging out the national rate of 0.7 percentage points. Despite this progress, significant graduation rate gaps remain for both populations and they continue to comprise a

disproportionate percentage of the nation's non-graduates.

Hispanic Students

One year after reaching an 80 percent graduation rate, Hispanic students again achieved an all-time high of 81 percent. Five states (Alabama, Arkansas, Maine, Texas, and West Virginia) led the group with Hispanic graduation rates above 85 percent. West Virginia continues to graduate more than 90 percent of its Hispanic students (only about 1.3 percent of the state's 2018 cohort), the only state to do so, with a rate of 92 percent. Just two states (Louisiana and Minnesota) continue to lag below a 70 percent graduation rate for Hispanic students.

Across the country, Hispanic students continued to graduate at rates lower than their non-Hispanic peers. The national graduation gap between Hispanic students and their white peers is 8.1 percentage points. The gap between white and Hispanic students stretched as high as 21.6 percentage points in Minnesota and 21 points in Maryland, while in West Virginia, Hispanic students graduate at slightly better rates than white students.

Moreover, while Hispanic students accounted for a quarter of the 2018 graduating cohort, they disproportionately comprised 31.2 percent of the nation's non-graduates. This imbalance is also present at the state level. In Connecticut, New Jersey, and Massachusetts, the gap between the overall Hispanic population in the 2017–18 cohort and percent of non-graduates that are Hispanic is over 15 percent (see Table 8).

Hispanic students continue to be highly concentrated in select states, with over half of the 2018 graduating cohort located in California, Florida, and Texas. In 3 states (California, New Mexico, and Texas), more than half of the non-graduates are Hispanic and nearly 60 percent of all Hispanic students that fail to graduate on time are located in just 6 states. This makes the population highly accessible for targeted efforts aimed at improving outcomes for Hispanic students.

Black Students

Graduation rates for Black students continue to fall below the national average with a rate of 79 percent—though this does mark an annual increase of 1.2 percentage points, the second largest yearly gain of any subgroup. In 4 states (Alabama, Arkansas, Texas, and West Virginia), Black students outpace the national average with graduation

Table 7 • States with the Largest Graduation Gaps Between Hispanic and White Students

State	Regulatory Adjusted Cohort Graduation Rate, White: 2017–18	Regulatory Adjusted Cohort Graduation Rate, Hispanic: 2017–18	Graduation Rate Gap between White and Hispanic Students, 2017–18
Minnesota	88.40%	66.80%	21.60%
Maryland	93.20%	72.20%	21.00%
South Dakota	89.90%	71.00%	18.90%
New York	90.10%	71.60%	18.50%
Massachusetts	92.20%	73.80%	18.40%
Virginia	91.80%	73.50%	18.30%
Louisiana	85.50%	68.00%	17.50%
Pennsylvania	90.50%	73.70%	16.80%
North Dakota	91.40%	75.00%	16.40%
Connecticut	93.40%	78.60%	14.80%

Table 8 • States with the Highest Proportion of Hispanic Non-Graduates, 2017–18

State	Percent of State's Non-Graduates that are Hispanic	Percent of students in the Cohort that are Hispanic	ACGR 2018, Hispanic
New Mexico	61.9%	60.1%	73.1%
California	59.7%	52.3%	80.6%
Texas	59.5%	50.4%	88.2%

Tennessee	40.0%	24.5%	83.1%
Delaware	39.9%	31.1%	82.0%
North Carolina	32.4%	26.4%	80.0%
Florida	30.7%	22.4%	85.4%

rates ranging from 85.6 percent in Arkansas to 87.7 percent in Alabama. Yet, 5 states—Minnesota, New Mexico, Ohio, Oregon, and Wisconsin—continue to lag below a 70 percent graduation rate.

The national graduation rate gap between Black and white students continues to drop, from 17 points in 2011 to 10.1 percentage points in 2018. Still, Black students trail their white classmates by over 15 percentage points in 7 states, including Wisconsin and Minnesota, where the graduation rate gap is above 20 points.

In 2018, Black students accounted for 15.7 percent of the graduating cohort compared to 22.4 percent of the nation's non-graduates. This disproportionality is seen particularly across the South, where Black students compose more than 4 of every 10 non-graduates in Alabama, Georgia, Louisiana, Mississippi, South Carolina, and Tennessee. This disproportion, however, is not just in the South. There is a combination of Midwest/Northeast states (New York, Ohio, Pennsylvania, and Wisconsin) and a subset of Southern states (Georgia, Louisiana, and Maryland) that have substantial Black

populations with Black student graduation rates below 75 percent.

Where We Stand: Students Experiencing Homeless

Data from the National Center for Homeless Education (NCHE) show that over 1.5 million K–12 students were identified as experiencing homelessness during the 2017–18 school year. This marks an 11 percent increase over the previous year and an all-time high (National Center for Homeless Education, 2018). Part of this increase may be due to schools and districts doing a better job identifying homeless students, which is a positive trend.

Students experiencing homelessness face academic challenges that go far beyond that of stably housed, low-income students (Ingram, Bridgeland, Reed, and Atwell, 2016). Previously, data on the academic outcomes of students experiencing homelessness were limited. Yet, thanks to ESSA, states were required to disaggregate high school graduation rates and academic achievement information for students experiencing homelessness, beginning with the 2017–18 school year. This data confirmed the unique challenges this population faces.

Data from 49 states showed the graduation rates of students experiencing homelessness ranged from a low of 47 percent in Minnesota to a high of 87 percent in West Virginia. In total, 14

Strategies for Success

America is ramping up efforts to improve outcomes for students experiencing homelessness and there are concrete campaigns to focus the nation's attention on this highly vulnerable population (see Education Leads Home). In addition to increased awareness of the problem, groundbreaking legislation and policies at all levels, public and private support organizations, local communities, and states are undertaking a variety of efforts to boost outcomes for some of the country's most vulnerable children and youth. Examples around the country can inspire other schools, districts, communities, and states to identify, engage, and support students experiencing homelessness in America's schools. With all of the trauma a young person experiencing homeless is exposed to, school can be a pillar of stability that puts students on

a path to graduation and further education to successfully enter the workforce and civic life.

To learn more about a variety of efforts to identify and support students experiencing homelessness in schools and districts throughout the country, Civic conducted interviews with educators in Michigan, Montana, New Hampshire, Texas, and Virginia. The goal of this project was to identify strategies schools and districts are using to successfully mitigate the challenges these students face in attending and succeeding in school and to disseminate those best practices.

This work supplements multiple efforts of Building Changes, a Seattle based nonprofit, aimed at identifying a replicable model for schools on how best to meet the needs of their students experiencing homelessness.

Through a combination of quantitative and qualitative analysis, Building Changes has developed a Menu of Strategies to which Civic has matched case studies that further illuminate practices other schools and districts can draw upon to improve outcomes for students experiencing homelessness.

The report, *Strategies for Success*, highlights examples of the tireless efforts of those throughout the country who are ensuring better educational equity for students experiencing homelessness. These efforts include supports in academics, credit recovery, connections to housing resources, social and emotional learning, and transportation. It is our hope that these examples will be used to spark innovation, reform, policies, and student supports that will improve outcomes across the nation.

states had graduation rates less than 60 percent for students experiencing homelessness.

While NCHE did not provide a national average graduation rate, author calculations using cohort counts from 49 states plus the District of Columbia produce an estimated national graduation rate of 67.5 percent for students experiencing homelessness. This estimated rate leaves students experiencing homelessness with the second lowest graduation rate of any subgroup in the country, ahead of only students with disabilities, and well behind the graduation rate for low-income students (79.5 percent) and the overall national average for all students (85.3 percent).

It bears mentioning that since most states are just beginning to disaggregate graduation rates by housing status, it is expected that further improvements will be made in calculating graduation rates for students experiencing homelessness. In addition, more analysis is needed to better explain the large discrepancy in graduation rates across states.

Still, there is no escaping the fact that students experiencing homelessness graduate at far lower rates than their stably housed peers. Research also shows that youth without a high school diploma are 4.5 times more likely to experience homelessness later in life (Morton, Dworsky, and Samuels, 2017), perpetuating the cycle of homelessness and poverty. With more data, states can better address the poor academic outcomes for students experiencing homelessness and design interventions to support these students to break the cycle of poverty.

Where We Stand: Students with Disabilities

As previous *Building a Grad Nation* reports have highlighted, cross-state comparisons for students with disabilities are challenging due to differences in state diploma requirements and identification procedures. While these variations—including reduced credit requirements, substitute courses, and lower performance criteria—may align with state graduation requirements, they run the risk of not successfully preparing students with disabilities for postsecondary education. Recent research also shows that over half of states offer diploma options specifically for students with disabilities, but just seven states responded when asked if they report data on the number of students receiving different

diploma types (Achieve, 2016; Johnson, Thurlow, Qian, and Anderson, 2019).

The differences in requirement and lack of data reporting make conclusions from state-by-state analysis for students with disabilities' graduation rates more difficult than other subgroups. States should disaggregate data by the types of diplomas students with disabilities receive in order to better understand the education landscape and to ensure they are held accountable for progress within this subgroup.

Despite challenges with state-to-state comparisons, it is undeniable that students with disabilities continue to graduate at rates well below their peers. For the first time in 6 years, the graduation rate for students with disabilities did not increase from 2017 to 2018, remaining at 67.1 percent nationally. Since last year, this subgroup has been surpassed by English Learners and students experiencing homelessness, making it the subgroup with the lowest graduation rate in the country.

Like previous years, the majority of states increased their on-time graduation rate for students with disabilities, as 30 states saw a rate increase. Sixteen states' graduation rates for students with disabilities, however, decreased, including 14 states whose decrease was at least 1 percentage point or more. It is worth mentioning large swings among states from previous years: Although Florida increased their graduation rates for students with disabilities by 11.4 percentage points, Oklahoma and Ohio's graduation rates dropped 18.7 and 19.1 percentage points, respectively. Additional analysis will be needed to determine the reason for these significant year-to-year fluctuations.

A graduation rate gap of 20.7 percentage points between students with disabilities and their peers without special needs emphasizes the inequitable educational outcomes that they face. This gap varies across states, ranging from 5.2 percentage points in Arkansas and 8.3 in Kansas to 50.7 percentage points in Mississippi and 36.5 in Ohio. The graduation rate gap between students with disabilities and their peers was greater than 20 percentage points in 26 states, while only 3 states had gaps that were less than 10 percentage points.

Students with disabilities are making up an increasing percentage of students that fail to graduate on time. In 2017–18, the rate increased 1.8 percentage points to 27 percent, despite comprising only 12.1 percent of the total 2018 cohort. Many of the states that have above average high school graduation rates had a 2018 cohort comprised of over 15 percent of students with disabilities: Maine, Massachusetts, New Hampshire, and Pennsylvania are among the top. The percent of non-graduates that are students with disabilities is above 35 percent in all 4 of these states. Even though states are better identifying students with disabilities, they cannot reach a 90 percent graduation rate without major outcome improvements for these students.

This reveals that although states are improving their overall graduation rates, students with disabilities continue to struggle to graduate at similar rates. Combined with the fact that over one in every four students who failed to graduate in the 2017–18 cohort had special needs, this emphasizes the importance of focusing on equitable outcomes for students with disabilities in all states.

Table 11 • States with the Highest Proportion of Non-Graduates that are Students With Disabilities (SWD), 2018

State	Percent of State's Non-Graduates that are SWD	Percent of SWD within the 2018 Cohort	ACGR 2018, SWD
Massachussetts	44.2%	19.5%	72.4%
Ohio	43.1%	15.9%	51.4%
Connecticut	41.2%	13.7%	65.0%
Maine	40.9%	20.9%	74.0%
New Hampshire	39.4%	17.0%	74.0%
Mississippi	38.5%	10.0%	38.4%
New York	38.4%	15.8%	56.9%
Rhose Island	37.7%	15.9%	62.0%
Virginia	37.2%	12.0%	61.2%
Vermont	35.5%	16.5%	68.0%

Where We Stand: English Learners

The percentage of K–12 public school students in the United States that were English Learners (ELs) increased from 8.1 percent (3.8 million students) in the fall of 2000 to 9.6 percent (4.9 million students) in the fall 2016, representing an increase of more than one million students.[4] In 2016, ELs comprised over 10 percent of public school students in 9 states, and the top 3 states had ELs comprising over 15 percent—California at 20.2 percent, Texas at 17.2 percent, and Nevada at 15.9 percent. Reflecting this growing population, all but seven states had an increase in English Learners from the fall of 2000 to the fall of 2016.

The English Learner population is very diverse. It is 5 percent Black, 15 percent white, 18 percent Asian, and 37 percent Hispanic. ELs most commonly live in urban areas, where they accounted for 14 percent of all K–12 students in the fall of 2016, followed by suburban areas (9.3 percent), towns (6.5 percent), and rural areas (3.8 percent). In the fall of 2016, 77.2 percent of English Learners were Hispanic (3.82 million students) and the majority (76.6 percent) of ELs' home language was Spanish/Castilian, followed by Arabic (2.6 percent), Chinese (2.1 percent), and Vietnamese (1.6 percent). The 76.6 percent that speak Spanish/Castilian at home account for 7.7 percent of total school enrollment in the U.S (National Center for Education Statistics, 2019).

EL students are most prevalent in early elementary education. The highest proportions are in Kindergarten and 1st grade, where 16.2 and 16.3 percent, respectively, of all students were ELs in the fall of 2016. This is due, in part, to students who are identified as English Learners when they entered school reaching language proficiency as they progress in their education. Only 4.1 percent of 12th grade students were English Learners in the fall of 2016. Of the 2018 cohort, 6.9 percent of students were ELs.

Encouragingly, after a slight decrease in 2016–17, English Learners' graduation rate increased 1.9 percentage points to 68.3 percent in 2017–18. Still, EL students have the third lowest graduation rate of any subgroup of their peers, slightly higher than students with disabilities and students experiencing homelessness. Nearly half (24) of states had graduation rate increases of at least 1 percentage point for EL students, but there is still much progress that needs to be made: In 38 states, on-time graduation rates for EL students were at or below 75 percent.

Even with an increased graduation rate of 68.3 percent, English Learners graduate at a rate 18.3 percentage points below their non-English Learner peers. Graduation rate gaps for English Learners range from a low of 0.7 percentage points in South Carolina to a high of 53.8 in New York. Nebraska and Louisiana also have large graduation rate gaps at 41.3 percent and 46.4 percent, respectively. Twenty states have gaps greater than 20 percentage points.

English Learners are not only becoming a larger proportion of the population, they are also disproportionately comprising the nation's non-graduates. In 2017–18, English Learners composed 14.9 percent of all students who failed to graduate in four years (a 1.2 percent increase from 2016–17) but comprised just 6.9 percent of the cohort. Unlike previous years, only two of the states with the largest percent of non-graduates that are English Learners share a border with Mexico—California and New Mexico. The other three states in the top five—Colorado,

English Learner Defined

As defined by the Every Student Succeeds Act in 2015, an English Learner is an individual who is aged 3 through 21; is enrolled in an elementary or secondary school; was not born in the United States or whose native language is a language other than English; is a Native American or Alaska Native; comes from an environment where a language other than English has had a significant impact on his or her level of English language proficiency; and whose difficulties in speaking, reading, writing, or understanding the English language may be sufficient to deny such individuals the ability to meet academic standards, be successful in a classroom where the language of instruction is English, and participate fully in society (U.S. Department of Education, 2016).

4. NOTE: Data comparisons between the total number of ELs enrolled in public schools and the percentage of public schools students prior to the 2014–15 school year must be done with caution. Previously, this data only included students who participated in EL programming. Beginning in 2015, however, calculations were changed to include all EL students, regardless of program participation.

Massachusetts, and Virginia—are spread across the country, showing the increased prevalence of English Learners nationwide and further emphasizing the importance of addressing educational inequities.

Where We Stand: Low-Graduation-Rate High Schools

Since 2004, core partners of the GradNation campaign have worked to identify and locate the nation's lowest performing schools. Then, the definition for these schools was those with a promoting power of 60 percent or less.[5] Now, following the passage of the Every Student Succeeds Act (ESSA) in 2015, every state is required to identify high schools enrolling at least 100 students with graduation rates of 67 percent or lower for comprehensive support and improvement. While the definitions have changed, the focus on the nation's lowest performing schools—and their importance in reaching a 90 percent graduation rate equitably—has never wavered.

This report began tracing the nation's progress in reducing the number of low-graduation-rate high schools, as defined by ESSA, two years ago. By 2018, there were 2,062 such schools, down from 2,357 in 2017 and 2,425 in 2016. These low-graduation-rate high schools accounted for 11 percent of all high schools and enrolled only 7 percent of the 2018 cohort, but educated approximately 28 percent of all four-year non-graduates.

Table 12 indicates that low-income, Black, and Hispanic students disproportionately attend low-graduation-rate high schools. While low-income students accounted for 44.5 percent of students nationwide, they comprised nearly 57 percent of the students in low-graduation-rate high schools. Similarly, Hispanic students were about one-fourth of all students in public high schools with 100 or more students in the 2017–18 school, but over 31 percent of students in low-graduation high schools. Black students were similarly over-represented. Conversely, white students were just under 50 percent of high school students, but less than one-third of the students attending low-graduation-rate high schools.

While ESSA sets the enrollment cutoff at 100 students for schools identified for comprehensive support and improvement,

5. Promoting Power compares the number of seniors enrolled in a high school to the number of freshmen four years earlier (or three years earlier in a 10–12 grade high school).

Table 12 • States with the Highest Proportion of Non-Graduates that are English Learners (ELs), 2018

State	Percent of Non-Graduates that are ELs	Percent of ELs within the 2018 Cohort	ACGR 2018, ELs
New Mexico	34.0%	30.7%	71.1%
California	28.1%	14.9%	67.9%
Virginia	26.9%	7.9%	57.2%
Massachusetts	26.1%	8.9%	64.1%
Colorado	22.0%	12.8%	67.0%
Texas	21.5%	9.4%	77.2%
Nevada	19.7%	13.8%	76.0%
Hawaii	19.6%	9.5%	68.0%
Maryland	19.2%	5.0%	51.0%
New York	18.8%	4.8%	31.1%

Focus Briefs: Immigrant and Native American Students

Civic has partnered with the Lumina Foundation to examine the educational experiences of two vulnerable populations in the United States—Immigrant students and English Language Learners, and American Indian and Alaska Native students. The educational outcomes of these student groups in high school and postsecondary education need significant improvement to close equity gaps, provide more equal access to the American Dream, and reach both the GradNation campaign's goal of a 90 percent graduation rate and the Lumina Foundation's goal of a 65 percent postsecondary attainment rate.

The national high school graduation rate in 2018 for American Indian and Alaska Native students was 73.5 percent, an increase from the rate of 72.4 percent in 2017. Although some states did not report data, there was a wide range at the state level: 90 percent in Alabama, Maryland, and Tennessee to 50 percent in South Dakota. In 2018, the dropout rate of American Indian and Alaska Native students (16–24 year-olds not enrolled in school who have not completed high school) was 9 percent, more than double the rate of their white peers (4.1 percent)[1].

Currently, the national postsecondary attainment rate stands at 48.4 percent, up from 38.7 percent in 2011. As the nation makes progress on the postsecondary attainment rate, however, it is important to note the gaps among subgroups. While the attainment rates of white adults moved from 49.9 percent in 2012 to 53.6 percent in 2018, American Indian rates changed less than 1.0 percent from 23.6 to 24.4 percent.

Data is not disaggregated by immigrant students at the high school level, however, immigrant students aged 19–24 years old comprise 23 percent of those in the U.S without a high school degree and about 98,000 undocumented students graduate from American high schools each year (Migration Policy Institute, 2019). Postsecondary attainment of immigrants is much more variable than that of native-born individuals. In general, immigrants are four times more likely than children of native-born parents to have less than a high school degree, but are almost twice as likely to have a doctorate (National Academies of Sciences, 2015).

The research briefs will also provide in-depth case studies of public and private high school and postsecondary institutions that are working to boost educational outcomes for these distinct populations. To stay up-to-date on these publications, visit www.civicllc.com.

1. The Conditions of Education 2020, (National Center for Education Statistics, 2020), https://nces.ed.gov/pubs2020/2020144.pdf.

Table 13 • Student Demographics in High Schools Reporting 2018 ACGR and Low-Graduation-Rate High Schools

	Total Number of Schools	Total Enrollment	FRL	Native	Asian	Hispanic	Black	White	Pacific	Multi
Schools with 100 or more Students reporting 2017−18 ACGR	18,577	15,591,726	44.5%	1.0%	5.3%	25.2%	15.2%	49.6%	0.4%	3.2%
Schools with 100 or more Students and 2017−18 ACGR at or below 67%	2,062	902,819	56.9%	2.3%	2.6%	31.3%	26.7%	32.3%	0.4%	4.3%

it is important for states to monitor what is happening in schools that fall below this threshold. About 6 percent of all on-time non-graduates attended schools with enrollment below 100. Moreover, states must ensure schools are not intentionally keeping students below 100 students to avoid accountability.

Low-Graduation-Rate High Schools by State

The number of low-graduation-rate high schools varies widely across states and with it, the numbers of non-graduates attending these schools. West Virginia remains the only state in the nation to not have a low-graduation-rate high school for the third consecutive year. Meanwhile, 29 percent of New Mexico's high

schools had graduation rates of 67 percent or less, the highest percent of any state in the nation.

Although other states have lower proportions of low-graduation-rate high schools, extensive numbers of their on-time non-graduates are found in these schools. Over one-third of all on-time non-graduates attended low-graduation-rate high schools in 10 states, with nearly half of non-graduates attending such high schools in Arizona and California.

Low-Graduation-Rate High Schools by Type

This report examines two broad types of low-graduation-rate high schools—regular and

alternative schools—which cover the majority of schools reporting ACGR in 2018. NCES defines a regular high school as any school that does not fall into the alternative, special education, or vocational category. Alternative schools, meanwhile, are defined by NCES as schools that address the needs of students that typically cannot be met in a regular school, provide a nontraditional education, serve as adjuncts to a regular school, or fall outside the category of regular, special education, or vocational education.

This report includes alternative and regular schools that are district- and charter-operated as well as virtual schools. Charter schools disproportionately tend to have low graduation rates. During the 2017−18 school

year, charter schools constituted 11 percent of all schools but 28 percent of low-graduation-rate high schools nationwide, while virtual schools covered 2 percent and 9 percent of all high schools and low-graduation-rate high schools, respectively.

Regular High Schools

District-operated regular schools are typically considered traditional American high schools. As such, they encompass the majority of schools in the nation. In 2018, district-operated, regular high schools accounted for 83 percent of all high schools and 30 percent of low-graduation-rate high schools. Just 4 percent of all district-operated regular schools had graduation rates at or below 67 percent for the 2017–18 school year. In 2018, regular high schools comprised 94 percent of all high schools but just 56 percent of low-graduation-rate high schools.

Charter schools are publicly funded, privately operated schools. Only five states—Montana, Nebraska, North Dakota, South Dakota, and Vermont—do not allow charter schools. In 2018, charter-operated regular schools comprised 10 percent of all high schools but 30 percent of all low-graduation-rate high schools. One of every four charter-operated, regular high schools had a graduation rate at or below 67 percent in 2018.

Alternative High Schools

The characteristics and definitions of alternative schools vary significantly from state to state. A 2014 state scan found that 43 states and the District of Columbia have formal definitions of alternative schools, yet there is little consensus among states on how to define the term. This includes differences in student populations these schools serve, their educational settings, the length of time students spend within alternative settings, and the instructional and environmental characteristics.

What is definitive, however, is that alternative schools educate many of the most at-risk and vulnerable students in the nation. Some of these students are sent to alternative settings, while others elect to attend them. Students in alternative settings often struggle with poor grades or chronic absenteeism; are pregnant or parenting; have disciplinary infractions; are in the midst of re-engaging with school; are returning from incarceration or adjudication; are wards of the state (i.e. in foster care or homeless youth); are in need of extra

assistance; have jobs that require them to work to support themselves or their families; are newcomers to the United States or refugees; or have mental health needs (Deeds and DePaoli, 2017).

Similar to regular high schools, alternative schools can be both district- and charter-operated. Across the nation, alternative schools as a whole amounted to about 6 percent of all high schools but 37 percent of those with a graduation rate at or below 67 percent in 2018. Most of the low-graduation-rate high schools in Idaho, Iowa, Kentucky, Texas, and Washington are alternative high schools.

In 2018, district-operated alternative schools accounted for just 5 percent of all high schools but 27 percent of all low-graduation high schools. In total, 66 percent of all district-operated alternative schools were low-graduation-rate high schools.

Similar to their district-operated counterparts, alternative charter schools serve non-traditional, often at-risk, students. They

amounted to just 1 percent of all high schools reporting ACGR in 2018 but 7 percent of all low-graduation-rate high schools. Seven of every 10 alternative charter schools had a graduation rate at or below 67 percent for the 2017–18 school year.

Virtual Schools

Virtual schools comprise just two percent of all high schools but about ten percent of all low-graduation-rate high schools. In four states (Arizona, Idaho, Indiana, and Ohio), students that attended virtual schools constituted over 20 percent of the all on-time non-graduates for the 2017–18 school year. In total, 61 percent of all virtual schools are low-graduation-rate high schools.

Improvements in the outcomes of alternative schools, including reducing the need for students to attend them, will be central to achieving a 90 percent high school graduation rate with equity.

Table 14 • States with the Most Non-Graduates that Attend Low-Graduation-Rates Schools with Enrollment at or Greater than 100

State	Number of Low-Graduation-Rate High Schools with Enrollment at or Greater Than 100	Percent of Non-Graduates that Attended a Low-Graduation-Rate High School with Enrollment at or Greater than 100	ACGR, 2018
California	398	49.80%	83.00%
Arizona	86	49.40%	78.70%
Idaho	31	46.60%	80.70%
Colorado	73	41.50%	80.80%
Indiana	35	40.10%	88.10%
Ohio	102	37.40%	82.10%
New Mexico	49	36.50%	73.90%
Alaska	28	35.70%	78.50%
Washington	63	34.60%	86.70%
Oklahoma	43	34.30%	81.80%

Meeting the
Moment Plan

The 'Meeting the Moment' plan was created to target the high schools where most of the non-graduates in America are found and ensure states, districts, and schools are serious about on-time completion with college and career readiness.

As the first two parts of this report outline, since 2011, the GradNation campaign has set clear goals. As a result, schools, school districts, and states across the nation have implemented evidence- and data-driven plans of action, and produced sizable high graduation rate and college enrollment gains. Yet, serious challenges in boosting high school graduation rates and improving college and career readiness still remain. In all, 544,688 students across the nation failed to graduate on-time in 2018 out of a total cohort of 3.6 million students. Analysis shows that 174,152 of these non-graduates needed to graduate on-time in 2018 to reach the 90 percent goal. High school graduation gaps by race, ethnicity, income, disability, language, and housing status are still significant, posing serious questions about the country's commitment to equal access to a quality education, as required by every State Constitution.

One of the most powerful illustrations of the glaring equity gaps that remain is the disparate outcomes students face based on the public school they attend. Most students attend high schools where the on-time graduation rate is already at 90 percent or above, with strong pathways to college or work. In other parts of the nation, however, students find themselves in a subset of low-performing high schools that have an average graduation of just 40.8 percent. It is with these high schools in mind that a 'Meeting the Moment' plan was created to target the high schools where most of the non-graduates in America are found and ensure states, districts, and schools are serious about on-time completion *with* college and career readiness.

There has been great progress and lessons learned over the past 15 years as part of the GradNation campaign and its predecessor efforts. But this report drills a level deeper, targeting exactly where the dropout challenge remains, as well as barriers to successful transitions to postsecondary education. What follows is our recommendations on how the nation can tackle the remaining work to reach a 90 percent graduation rate equitably and with a focus on college and career pathways.

Where the Dropout Challenge Remains: Strategic Targeting

Most of the remaining non-graduates are highly concentrated: the top 5 states with the highest number of non-graduates have 37 percent of the nation's non-graduates, the top 10 states have 56 percent, and the top 20 have 77 percent. At the district level, half of all on-time non-graduates are found in just 4 percent of school districts, while at the school level, 28 percent of all non-graduates are found in low-graduation-rate high schools with 100 or more students. These schools have a graduation rate of only 41.8 percent. The remaining non-graduates needed to reach a 90 percent graduation rate are spread widely across the country, with one-third of them distributed across 35 states and 12,000 school districts containing non-graduates.

For this reason, the Meeting the Moment plan focuses on 19 states with some of the highest numbers of non-graduates, plus an additional 3 states with graduation rates below the national average. Distilling the data further, half of the non-graduates in these 22 states are found in just 452 school districts and 887 low-graduation-rate high schools. Zeroing in on the most concentrated areas in this way allows effective, evidence-based actions to have the greatest leverage and impact the most students. A complete list of the targeted districts and schools can be found in Appendices P and Q.

The nature of every state's high school graduation challenge is distinct. Some states' non-graduates are concentrated in only a few districts, such as Nevada, where half of the state's non-graduates are found in just one district (Clark County, home of Las Vegas), or Florida where half of the state's non-graduates are found in 7 major districts, each producing over 1,000 non-graduates per year. Meanwhile, in Michigan, it would take 67 school districts to reach half of the state's

non-graduates. Some states have disproportionate numbers of non-graduates in non-traditional high schools, like Arizona, Indiana, and Ohio, where the districts with most non-graduates are virtual schools, or Indiana where a majority of non-graduates come from alternative schools. State-specific action plans will be essential to ensure states reach their students who fall behind to graduate on-time.

But this must be done with equity and quality, ensuring that all students—regardless of demographic, geographic, or socioeconomic background—have the supports needed to graduate from high school prepared for college or career. The 452 districts within the targeted states enroll a student population that is 62 percent Black and Hispanic and 53 percent low-income. In addition, over 73 percent of all Black non-graduates and 83 percent of Hispanic non-graduates attend schools in 22 target states, and within these 22 states nearly 73 percent and 82 percent, respectively, attend schools in the 452 target districts.

Every Diploma Counts: High School to College and Career Readiness

In an economy where the vast majority of jobs now require some postsecondary education or training, a high school diploma must be viewed as an on-track indicator rather than an end goal—one that signifies its recipient is prepared to succeed in college, workforce training, or national service.

To ensure quality, the Meeting the Moment plan examines key indicators and outcomes across the targeted states to understand the extent of current successes, identify challenges, and specify where more work and focus are needed to ensure that increasing high school graduation rates translate to college and career readiness. The metrics examined are: the Secondary School Improvement (SSI) Index developed in last year's *Building a Grad Nation* report and updated this year; college and career readiness indicators and graduation rate goals in state ESSA plans;

the alignment between requirements for high school graduation and college admissions in the targeted states; the use of Early Warning Systems (EWS); the extent to which a state's students are impacted by Adverse Childhood Experiences (ACEs) and poverty; and the rate of youth disconnection from school and workplace.

Secondary School Improvement Index

In recent years, there has been widespread debate on whether increasing high school graduation rates translates into greater readiness for postsecondary education and work. This report has continually marshalled the latest evidence of these relationships to highlight progress and warn readers of any challenges. The 2019 *Building A Grad Nation* report unveiled the Secondary School Improvement Index, designed to answer questions about whether students are entering high school ready for challenging coursework, whether states are producing more high school graduates on time, and whether those students are graduating ready for college-level work.

The Index brings together three key metrics. First, the percent of students scoring proficient in Reading and Mathematics on the 8th grade National Assessment of Education Progress (NAEP) exams is used as a measure of the extent to which states are increasing students' abilities to enter high school ready for challenging coursework. Second, the percent of high school students who score a 3 or higher on Advanced Placement (AP) tests (scored out of 5) is used as a measure of the extent to which states are increasing the college readiness of high school graduates. Lastly, the percent of students who graduate on time within four years is used as measure of high school graduation rates.

Taken together, these three metrics provide a set of indicators that allow us to examine the extent to which rising graduation rates are accompanied with increases in the number of students able to do challenging coursework. Gains in Mathematics and Reading proficiencies of incoming high school students and improvement in the percent of high school students doing well in AP courses do not mean that all graduates are prepared for college and careers. It does, however, indicate the extent to which states are both increasing high school graduation and college readiness rates or not.

The Index measures improvement on these four indicators from 2011 to 2018. Ideally, the SSI Index would show substantial growth at the state level across all four measures, and a red flag should be raised if states are found reporting rising high school graduation rates while other indicators remain stagnate or are declining.

Table 16 • Meeting the Moment Target States

State	ACGR, 2018	Number of Target Districts	Low Performing Schools Within Target Districts	Percent of Non-Graduates that are Black	Percent of Non-Graduates that are Hispanic*
Arizona	78.7%	16	26	46.0%	51.3%
California	83.0%	37	126	60.5%	54.2%
Colorado	80.8%	8	36	80.5%	55.7%
Florida	86.3%	7	60	66.5%	65.6%
Georgia	81.6%	10	20	58.3%	62.2%
Illinois	86.5%	11	42	70.1%	69.0%
Indiana	88.1%	20	13	62.5%	55.7%
Louisiana	81.4%	9	17	54.7%	74.5%
Massachusetts	87.8%	18	25	65.0%	70.2%
Michigan	80.6%	67	83	72.8%	51.9%
Minnesota	83.2%	25	30	76.6%	58.3%
Mississippi	84.0%	27	5	50.8%	67.8%
Nevada	83.2%	1	6	88.5%	73.0%
New Mexico	73.9%	7	24	82.0%	55.3%
New York	82.3%	26	134	57.4%	65.1%
Ohio	82.1%	45	58	63.2%	58.2%
Oklahoma	81.8%	22	23	81.7%	70.9%
Oregon	78.7%	16	18	77.9%	59.5%
Pennsylvania	85.9%	21	31	70.0%	67.3%
South Carolina	81.0%	9	15	55.0%	53.7%
Texas	90.0%	29	68	59.9%	52.6%
Washington	86.7%	21	27	77.0%	52.1%

* The percent of Black and Hispanic non-graduates in the target districts are two separate measures that are not meant to sum to 100 percent. This statistic measures the percent of Black and Hispanic non-graduates in the state who live in the targeted districts.

The Index shows that 14 of the 22 targeted states made improvements of at least 1 percentage point across at least 3 of the 4 indicators, with 6 states improving in all 4. Six of the remaining eight states increased in only two of the four indicators, while Arizona and Oklahoma struggled to improve more than one indicator. Across the nation, 8th Grade NAEP scores in Math continue to raise a red flag, and scores in Reading fell in most states from 2017 to 2019. States will need to look closely at the cause for lagging proficiency in these vital subjects and design actions to spur improvement.

Encouragingly, in all, 45 states improved both their high school graduation rate and the percent of students scoring at least a 3 on an AP exam, indicating that as high school graduation rates increased, so did the number of students demonstrating the ability to complete college-level work while in high school. Data on how all 50 states performed on the Index are available in Appendix M.

College & Career Readiness Indicators in State ESSA Plans

It is critical to understand the commitments states are making to improve high school education so a diploma signifies that a graduate is prepared for future schooling or work. Reviewing state ESSA plans and accountability frameworks allows evaluation of whether states are adopting sound metrics on key college and career readiness actions and opportunities. Key measures and actions states can undertake include advanced coursework or sequencing; career and technical (CTE) education courses or work-based learning; tracking high school graduates enrolling in college; tracking placement tests of high school graduates; measuring chronic absenteeism; monitoring 9th grade students to see if they are on-track to graduate on time; and providing a well-rounded education.

Our review indicated that while there has been progress, a great deal of work remains to strengthen the relationship between high school, college, and career. Most, but not all, of the 22

Table 17 • Targeted States' Secondary School Improvement (SSI) Index

State	8th Grade Reading Proficiency	8th Grade Math Proficiency	High School AP Scores Greater than 3	High School Graduation Rate	Total Index Score
States that Showed Improvement on All 4 Indicators					
Florida	4.1 ↑	2.9 ↑	8.1 ↑	15.3 ↑	30
Georgia	4.5 ↑	3.3 ↑	5.4 ↑	14.6 ↑	28
California	6.1 ↑	3.2 ↑	9.3 ↑	7 ↑	26

Colorado	-2.6 ↓	-6.6 ↓	7 ↑	6.8 ↑	5
Minnesota	-5.1 ↓	-3.4 ↓	5.3 ↑	6.2 ↑	3
Texas	-1.5 ↓	-10.4 ↓	6 ↑	4 ↑	-2
States that Showed Improvement on 1 of 4 Indicators					
Arizona	0.2 (=)	-0.5 (=)	5.3 ↑	0.7 (=)	6
Oklahoma*	-1.1 ↓	-1.8 ↓	1.8 ↑	-3 ↓	-4
National Average	0.8 (=)	-2.1 ↓	6.4 ↑	6.3 ↑	11

states we are targeting in the Meeting the Moment plan measure chronic absenteeism, advanced coursework, and career and technical education. Florida, Louisiana, Mississippi, and Pennsylvania do not measure advanced coursework, while Minnesota, Nevada, and Oregon do not measure career and technical education. Only three states measure the college enrollment of high school graduates; eight states measure placement tests; two states measure 9th grade students who are on-track; and three states measure a well-rounded education. Thus, there is tremendous room for improvement on the data collection and reporting of key metrics of college and career readiness and actions to improve them to ensure more students have stronger pathways from high school to college and work.

State High School Graduation Rate Goals in ESSA Plans

Seventeen of the targeted 22 states have established a high school graduation rate goal of 90 percent or higher, but most of their time frames extend beyond 2020, with some even pushing past 2030 (see Appendix N for every state's ESSA goals). This is troubling because it indicates that some states have confirmed it is okay for schools and districts to relax their efforts to boost graduation rates.

As noted throughout this report, there are clear challenges to graduating non-graduates, but existing data also clearly shows that some states with substantial high poverty rates and minority students have been able to push forward. These states serve as a challenge to those who are backsliding on the pace and ambition of their graduation rate goals. It is clear from reviewing state goals that some put a great deal of thought and analysis into the benchmarks they set, while others set goals that either assume progress will be minimal or are unattainable.

Setting ambitious, actionable, and pragmatic goals that create a clear expectation for students to finish high school is essential for states and the nation to stay on track. It will be important for states to remain accountable for progress overtime on their overall goals, as well as the ones set for student subgroups. Having high expectations for students and schools is an evidence-based practice that has a profound effect on the culture, climate, and performance of students, schools, and districts.

Early Warning Systems

Early Warning Systems (EWS) are a powerful, evidence-based reform that allow states to identify students falling off-track to graduate early and intervene with the necessary supports. While some evidence of the existence of early warning indicator data can be found in nearly all of the targeted states, often times there is a gap between state systems' potential data use and schools effectively employing Early Warning Systems on the ground. Data from the U.S. Department of Education show that only half of all high school principals report the existence of Early Warning Indicator data or systems in their schools and the number who report using them regularly is considerably less (U.S. Department of Education, 2016). This presents both an opportunity and a challenge for the Meeting the Moment plan.

Adverse Childhood Experiences

Vulnerable students often trigger EWS with lower rates of attendance, more behavior infractions, and lower achievement in courses of study (Bruch, Gellar, Cattell, Hotchkiss, & Killewald, 2020). But often, these things occur because of the environment these students experience outside of school. In order for the nation and states to be able to mobilize the resources necessary to 'meet the moment,' it is important to have a clear understanding of student need across the target states. In 16 of the 22 targeted states, 20 percent of students under age 17 encounter 2 or more ACEs and 13 out of the 22 have 20 percent or more of their students aged 5–17 living in poverty (Appendix S). This illustrates that many of these states need to effectively combine whole school improvements with enhanced student supports.

It should be kept in mind that state-level numbers likely underestimate the magnitude of student need in the districts and high schools where the majority of students who are not graduating on time go to school. Recent analysis by Save the Children shows that when examined at the county level, there are counties in the U.S. where student and family need is greater and more concentrated than in some high poverty nations in the world (2020). By focusing on these states, and the districts and schools within them, the Meeting the Moment plan will focus on large numbers of the nation's most vulnerable students. By doing so, the nation will work more effectively to reach the high school graduation rate goal equitably.

Youth Disconnection

Each year, Measure of America details the number of youths, ages 16 to 24, disconnected from both work and school in the United States, often referred to as opportunity youth or disconnected youth. In 2018, the most recent year available, the rate of youth disconnection was 11.3 percent. While this signifies a decrease from previous years, it still amounts to 4.3 million youth out of school and work. This is a number that is likely to rise as a result of COVID-19 and its associated school and economic disruptions. Disconnected youth provide a metric to capture the cost and magnitude of not increasing high school graduation and postsecondary schooling and training attainment rates.

Of the 22 targeted states, New Mexico had the highest percent of disconnected youth at 16.5 percent, the third highest of any state in the nation, while Minnesota's 6.2 percent is the second lowest rate in the country. In total, 11 of the 22 targeted states had rates of youth disconnection above the national average. Again, it needs to be noted that this is at the state level. Recent analysis by Measure of America shows that there are metro and rural areas with rates of youth disconnection many times higher than state and national averages (Lewis, 2020).

Alignment of High School Graduation and College Admissions Requirements

Remarkably, most of the targeted states, and most of all states, do not have alignment between what is required for high school graduation and admission to the state's flagship university systems. Only three states—Michigan,[6] Mississippi, and Washington—of the 22 examined have high school requirements for diplomas that match the college admissions requirements of state university systems (Appendix R). One other state, Oklahoma, required the correct amount of credits in high school, but students are not required to choose this sequencing, placing the burden to correctly navigate course selections and college admissions requirements on students, while guidance counselors are consistently tasked with advising an overwhelming number of students with the national average ratio of students to counselors being over 400 to 1 (American School Counselor Association, 2020). This disconnect between high school graduation and college admission requirements means that many students graduate from high schools with diplomas misaligned to a postsecondary education. States must step in to analyze and address these gaps and ensure curriculums are aligned so that local public postsecondary institutions are accessible for all high school graduates.

Meeting the Moment Plan for All Students

While the Meeting the Moment plan is focused on a subset of states, all states—including those close to reaching the 90 percent graduation rate threshold—must take this moment to redouble their efforts to ensure more students are graduating high school and doing so with a view of equity. As such, Civic and the Everyone Graduates Center are also working with the Council of Chief State School Officers (CCSSO) on a Meeting the Moment initiative targeted at some of the states that are closest to a 90 percent graduation rate.

---

6. There are a number of states in which the high school graduation requirements would meet the college admissions requirements, were it not for the foreign language requirement. Most of these states, however, have sequencing issues on other subjects, meaning the number of credits required are correct for everything except foreign language requirements but the type of courses required is off in at least one other subject (an example of this would be a student taking four years of math but never completing Algebra II—and their state college requiring Algebra II). This also includes some states where course type and sequencing could align depending on the students' choice. Yet, this puts the onus on the student and guidance counselors—who are often tasked with advising huge numbers of students—to choose the correct course sequencing.

Connecting Social-Emotional Development, Academic Achievement, and On-Track Outcomes

A recent report by the Everyone Graduates Center at Johns Hopkins University, *Connecting Social-Emotional Development, Academic Achievement, and On-Track Outcomes: A Multi-District Study of Grades 3 to 10 Students Supported by City Year AmeriCorps Members*, examined the relationship between social-emotional development and academic outcomes for 3rd to 10th grade students in schools where City Year AmeriCorps members serve as full-time tutors, mentors, and role models.

The multi-district study used the data provided by the City Year network of schools to examine the connection between social-emotional skills and multiple measures of educational outcomes such as attendance, course performance, and achievement. The study is distinct in the size and scope of its sample. It covers elementary, middle, and high school grades from districts spread geographically across the nation, including data for over 38,000 students from 326 schools in 28 cities across 20 different states. Additionally, the sample, while not random or representative of the national population, is a purposive sample of high-poverty schools in urban areas—exactly the kind of schools and students state and federal agencies typically target with support efforts.

The study found that the more hours students spend working with a City Year AmeriCorps member, the less likely they are to struggle with the various social and emotional competencies at the end of the school year (controlling for start-of-year social and emotional levels). The analyses show that the more hours a student spends receiving support from a City Year AmeriCorps member in either English or Math, the higher the outcomes, not only in the related subject, but also in attendance. For students who received the median number of hours of support from a City Year AmeriCorps member for English or Math, the related increase in their course grade was 0.10, equivalent to one-tenth of a grade (A through F). The effect size (0.08-0.09) can be translated to roughly two to four months of learning and academic achievement growth. Further, students receiving the median amount of support from a City Year AmeriCorps member are 42 percent less likely to be off-track in English (odds-ratio = 0.58) and one-third less likely to be off-track in Math (odds-ratio = 0.66).

The results of the study also found statistically significant and consistent relationships between students' social-emotional skills and their academic outcomes. The effects of moving students' SEL skills either from a 'Need for Instruction' to a 'Typical' level, or from a 'Typical' level to 'Strength,' primarily fell between one-quarter to one-third of a standard deviation (0.25-0.33). The sizes of these standard deviations are considered to be large and substantial shifts in comprehensive school reform and student achievement. The What Works Clearinghouse's "Improvement Index," weighs effect sizes in the 0.25-0.33 range as equivalent to raising the average student by 10 to 13 percentile points. Further, a student who moves from an area of 'Strength' to 'Typical,' or from 'Typical' to 'Need for Instruction,' is roughly twice as likely to be have low attendance, receive a low course grade, or receive a low test score.

Taken together, the above findings highlight two important points for education policy. The first is that social-emotional skills are strongly linked to academics, which supports a holistic, whole-child and whole-school approach to education. This study replicates the growing body of evidence on the importance of SEL skills using a large data sample. The large relationship size affirms policymakers' efforts to adopt and support social-emotional development as a part of basic K–12 education. The second important point for policymakers is that school practitioners and community partners who get involved in a student's education can be successful in developing students' social-emotional skills, as well as their academic outcomes.

Not only are social-emotional outcomes important for students' educational success, they are susceptible to change through the investment of school practitioners and community partners. Moreover, these findings were drawn from a large multi-district sample across elementary, middle, and early high school grades. This suggests that they are not the result of extraordinary efforts in a unique setting or limited to a particular age of students, but rather can occur at a range of high-needs schools within high-needs school districts—the very settings whose populations struggle the most and where support is typically focused. These results intensify the call to action for educators and policymakers to support the expansion and integration of social-emotional development in schools across the nation.

Policy and Practice
Recommendations

Now, with the remaining gaps in educational outcomes and the emergence of the new challenges of the effects of COVID-19 on schools, public health, and the economy, it is more important than ever to continue to ensure all students have educational opportunities and are prepared for postsecondary education as the demands of the workplace increasingly require a postsecondary degree or training of some kind.

Continue to improve graduation rate data collection and reporting.
High school graduation rates

In its eighth year, the Adjusted Cohort Graduation Rate remains the 'gold standard' of graduation rate metrics. There still, however, are many ways to improve data quality and ensure the best possible data is being reported. For one, variations across states in how subgroups such as students with disabilities and English Learners are identified must be addressed. Other differences include how transfer students are counted and the definition of a "regular" diploma, which add to the difficulties in cross-state comparisons and can leave loopholes for states to make graduation rate calculations seem higher.

There are also additional layers of data that could provide valuable information that are not collected by the U.S. Department of Education. For example, graduation rate data is not disaggregated by gender, leaving no way to gain further insights on populations particularly underserved. Data is also unable to be analyzed across subgroups, such as low-income white students or Hispanic English Learners, which could help pinpoint where major gaps in graduation rates exist. Expanding the data's capabilities will allow for greater graduation rate reporting accuracy and improved identification of groups of students that need additional assistance and interventions to graduate on time.

Postsecondary transitions and outcomes

The creation of the Adjusted Cohort Graduation Rate, disaggregated by state, districts, schools, and demographics, provides a reliable and consistent indicator of high school success. Data at the postsecondary level, however, is not as readily available or reliable. We need state-level data on the percent of high school graduates who immediately enroll in postsecondary education disaggregated by subgroups. This is a key metric of momentum toward postsecondary success. Other key data to collect are whether high school graduates are succeeding in postsecondary in a timely matter and how that tracks based on the state where the student was educated and their socioeconomic background. More is also needed on the effectiveness of postsecondary institutions at supporting students as they seek degrees and move into their chosen career paths.

Promote policies that reduce damaging academic disparities.

Subgroups such as Black, Hispanic, low-income, and Native American students are less likely to graduate high school on time and college- and career-ready. Although it is uplifting that the graduation rate gaps between these groups of students and their white and more affluent peers have decreased, they still remain behind on crucial education indicators. Many of these students attend schools that remain among the lowest performing in the nation. States should make greater investments in these schools to ensure equitable access to postsecondary education opportunities. We have also learned in the COVD-19 crisis, that many of these same students do not have access to the internet, limiting everything from virtual learning to finding homework assignments.

High- and low-poverty school districts

Another inequity that states should address is between high- and low-poverty school districts. This could be achieved through weighted funding formulas that provide more money to schools that serve students with the greatest need, particularly given these schools

are located in areas that often have very low tax bases. States and districts should work together to follow the evidence of what works and determine where that funding would be most effective, especially when developing comprehensive support and improvement plans for the lowest-performing schools. Despite no accountability for states to meet certain graduation rate goals for subgroups of students, the federal government should continue to monitor state progress toward the subgroup goals set in ESSA. In addition, the Office for Civil Rights data collection should continue to identify and report on racial, income, and disability disparities.

Students with disabilities

Because of the variations in diploma options specifically for students with disabilities, state-by-state data comparisons in this subgroup are difficult. More importantly, however, this also creates challenges for the students themselves, who graduate unprepared to succeed in postsecondary education. As previously mentioned in the report, just seven states actually collect and report data on the types of diplomas students with disabilities are receiving (Johnson, Thurlow, Qian, and Anderson, 2019).

The variation across states in graduation rates for students with disabilities should be further investigated to understand why some states have made progress while others continue to lag. All states should disaggregate data on the type of diplomas students with disabilities receive to better understand the education landscape for students with

disabilities. NCES should also set a universal definition of a student with a disability and how those with the most significant cognitive disabilities who graduate with a state-defined alternative diploma are counted. Finally, states should promote postsecondary success for students with disabilities by ensuring their graduation requirements and diplomas align with those at the postsecondary level.

Students experiencing homelessness

Students experiencing homelessness are disproportionately exposed to a host of risk factors that make succeeding in school even more difficult (Schoolhouse Connection, 2019). These students are more likely than their stably-housed peers to be held back from grade to grade, have poor attendance or be chronically absent from school, fail courses, have more disciplinary issues, and drop out of school. These negative effects are amplified the longer a student remains homeless (Ingram, Bridgeland, Reed, and Atwell, 2016).

Schools, districts, and states should work to ensure that homeless liaisons in their Local and State Education Agencies have the ample resources needed to support students experiencing homelessness. A few ways that students experiencing homelessness can be supported include basic needs donation drives, implementing positive school discipline policies, ensuring access to quality credit recovery and alternative programs where available, access to supports outside of the school day, transportation options to and from school, and McKinney-Vento Act training for school and district staff members.

Strengthen the transition from high school to postsecondary and careers.

The transition from high school into postsecondary education and careers is challenging for students. K–12 education leaders can ease this transition by providing students with the resources to understand their postsecondary options, the application process, and the course requirements for their chosen pathways. Leaders can also support students in other ways such as increased access to dual enrollment, early college career academies, and career and technical education coursework. States should work to ensure students form all backgrounds have equal access to rigorous course work such as Advanced Placement classes and high-quality science and math courses.

Postsecondary institutions must support more students, especially first generation and low-income students, before they step onto campus and while they are enrolled. These supports can include offering academic preparation courses prior to high school graduation; embracing testing-optional-admissions policies; developing more structured and strategic advising and engagement opportunities for students during the summer gap and school year, particularly during their critical freshman year; and ensuring students have access to tutoring and other academic support. Additionally, it is critical to the increasing number of low-income students who attend postsecondary institutions that financial aid is navigable and substantial enough to cover basic needs like food and housing.

Employers can help the transitions from high school by increasing internship and job shadowing opportunities for students to learn in real-time. They can also provide mentoring to high school students who may lack the adult guidance critical to educational success. Lastly, employers can work with schools to create an innovate final semester of high schools where students can have more practical, hands-on learning experiences.

Federal policymakers can also strengthen the transition for high school to postsecondary and careers by allowing federal Pell Grants to be used to pay for college courses taken in dual enrollment and early college programs. They should also increase national service opportunities, which would provide additional mentors and tutors

Corporation for Public Broadcasting

The Corporation for Public Broadcasting has been a powerful ally to Civic and the GradNation campaign through its American Graduate initiative for many years. American Graduate is public media's long-term commitment to helping young people succeed in school, career, and life. American Graduate works through national and local reporting, public forums, and town halls to help communities understand the challenges and opportunities within education and the workforce. It connects students to the

resources they need to have opportunities that will help them be successful and fill the current skill gap.

Since 2011, the initiative has led to over 125 public media stations engaging with over 1,700 partners and inspiring more than 9,000 adults to become "American Graduate Champions:" committed and caring mentors to the young people in their communities. This national influence is crucial to the reach of the GradNation campaign efforts and other education and graduation rate policies.

in high-need schools, and increase funding for research on college and career pathway initiatives, which would build the evidence of what is effective.

Align diploma requirements with college- and career-ready standards.

Our analysis shows that students who graduate high school after completing the required courses for admission into a state's university system is a strong predictor of postsecondary success. It is alarming, however, that we found misalignment between high school graduation requirements and college admissions requirements of state university systems in nearly *all* states. Two reports on the quality of high school diplomas support this finding, as well as the number and demographics of students earning a college- and career-ready diploma where available (Almond, 2017; Jimenez and Sargrad, 2018). This major

misalignment disadvantages students by underpreparing them for further education and increasing their chances of taking remedial courses, which add time and financial burdens to a postsecondary education.

It is critical for state leaders to certify that high school diploma requirements are aligned with state college and university systems' admissions criteria to ensure students on track to graduate do so prepared to enter postsecondary or career pathways. Schools and districts should cooperate to make more students, especially those from traditionally underserved populations, earn a college- and career-ready diploma.

Create state-specific high school graduation plans.

States should develop "Meeting the Moment" State Action Plans that analyze which districts, schools, and student subgroups within the state need additional support to ensure students graduate on-time and college- and career-ready equitably. This can be done using data

on the equity path to 90 for all states in this report (see Appendix H). These plans will allow states to identify students in need of critical interventions and help districts and schools be better equipped to implement effective interventions. We will be working with some states on such Meeting the Moment Action Plans in the coming year.

Further examine credit recovery programs.

Technology has afforded previously existing credit recovery courses to help more students earn their diplomas in a timely manner. Although high-quality models exist to get students back on track, the growth of credit recovery courses has also led to online learning without teacher or student interaction. This style of virtual learning has raised questions about the rigor of credit recovery programs. Educators have concerns over students being able to master critical concepts virtually on a condensed timeline, increased susceptibility

to cheating, and credit recovery as means to boosting graduation rates.

Credit recovery has been a target of recent skepticism about high school graduation rate gaming. It is difficult to measure this, however, because few rigorous studies have been done on the quality and effectiveness of credit recovery courses. Without data, we cannot understand the impact of these programs. It is therefore essential that credit recovery is further examined to uncover what type of students enroll, how many courses are taken on average, the percentage of total credits earned by students that are credit recovery courses, which courses are predominately taken as credit recovery, and the degree to which they are enabling students to learn course content and graduate with a legitimate diploma prepared to succeed in postsecondary education. We will be studying credit recovery more deeply in the coming year and with a separate forthcoming report.

Continue to monitor the impacts of COVID-19 and address education gaps exposed by the pandemic.

The COVID-19 pandemic that paralyzed the U.S. beginning in March of 2020 is entirely unprecedented. Schools across the country had to quickly transition to distance learning, in which the teacher or students interact only virtually, if at all. This quickly exposed many gaps in our education system—broadband access, socioeconomic differences, and increased hardships for students experiencing homelessness and those with disabilities. In

addition, states responded to the changing circumstances by altering graduation requirements for the Class of 2020, making any data from the year potentially unreliable.

The full impact of the COVID-19 crises is still impossible to understand. As such, policymakers must continue to closely monitor its impact on student learning, including postsecondary preparedness and added trauma for youth in the aftermath of the pandemic. In addition, it will be essential to tailor policies and practices to support the most vulnerable students as schools reopen in the Fall of 2020 or beyond, including, but not limited to, mental health and basic needs supports.

Expand the Use of Early Warning Systems.

Early Warning Systems are one of the most effective means districts can use to increase their graduation rates in all their high schools. Research has identified attendance, behavior, and course performance—the "ABCs"—as powerful predictors of high school completion (Bruce et al., 2011). Course performance in Grade 9, in particular, was shown to correlate strongly with high school graduation (Allensworth and Easton, 2005). The systematic use of Early Warning or on-track to graduation systems has been credited, for example, with the substantial rise in graduation and college readiness rates in Chicago, and throughout the state of West Virginia. Early Warning Systems provide teams of teachers, counselors, and nonprofit student support partners with real time data to signal which students (absent effective intervention) have high odds of not graduating, along with

protocols and procedures to identify and implement interventions with the highest odds of success. This allows schools to target the right intervention at the right time to the right student.

Although the idea of Early Warning Systems has become widely disseminated, their effective implementation has not. Half the nation's high schools report they do not have access to early warning indicator data, and even fewer report effective use of early warning systems (U.S. Department of Education, 2016).

Expand Capacity of Evidence-Based Nonprofits.

Schools cannot face the dropout challenge alone. For decades, community-based nonprofits have provided additional capacity to schools to support students and teachers, boost student achievement and graduation, and create stronger pathways from school to work. Public and private funding should flow to nonprofits that have the most capacity to meet the needs of schools and districts and that have the strongest evidence of success increasing high school graduation rates and student achievement.

Conclusion

Since 2001, predecessor efforts and the GradNation campaign have worked to identify and spread the data and know-how needed to increase national high school graduation rates equitably. Countless schools, school districts, states, students, teachers, and school leaders have done the hard work to analyze their graduation challenges and develop effective responses. The effort has had wide-reaching benefits to individuals, the economy, and our civic society. Now, with the remaining gaps in educational outcomes and the emergence of the new challenges of the effects of COVID-19 on schools, public health, and the economy, it is more important than ever to continue to ensure all students have educational opportunities and are prepared for postsecondary education as the demands of the workplace increasingly require a postsecondary degree or training of some kind. It is crucial that the campaign and the country continue to 'meet the moment' to reach a 90 percent high school graduation rate goal with equity and quality. We are optimistic that our country can rise to this challenge and provide every student the support and learning experiences they need to graduate high school ready for college, career, and civic life.

Council of Chief State School Officers

The Council of Chief State School Officers (CCSSO) is a nationwide nonprofit organization committed to ensuring all students who participate in the public education system, regardless of background, graduate prepared for college, careers, and life. CCSSO brings together dedicated leaders and advocates for educational issues to bring their views to professional organizations, federal programs, Congress, and the public in order to achieve measurable progress for students.

AT&T is dedicated to expanding the capacity of evidence-based nonprofits. They have collaborated with CCSSO to create additional action plans for four geographically diverse states that need less than 1,000 students to graduate in the Class of 2020 to reach the 90 percent high school graduation rate goal. With AT&T's support, CCSSO will also manage a grant program for these four states, which will give them money for targeted efforts that support equitable graduation rates.

Note. † = Not applicable: Data are not expected to be reported by the SEA for SY2010−11 or SY2015−16. Percent of Low-Income Students in the Cohort, 2016 (%) = the number of low-income students divided by the total cohort size within each state. Estimated Non-Low-Income ACGR (%) = the estimated graduates from all students minus low-income graduates divided by the estimated total cohort of all students minus low-income within the cohort (i.e., using state level ACGRs). Gap Change Between Non-Low-Income and Low-Income ACGR (Percentage Points), 2011−17 = the gap between the estimated non-low-income and low-income ACGRs from 2010−11 to 2016−17. Therefore, positive values indicate gap closure and negative values indicate gap widening.

Wisconsin	11.2%	92.4%	68.6%	23.8
Wyoming	13.8%	84.7%	63.0%	21.7

Note. Total Cohort Size (N) = the sum of all students in the 9th grade cohort in the district level ACGR file listed below. Percent of Students with Disabilities within the Cohort (%) = the number of SPED students divided by the total cohort size within each state. Estimated Non-SPED ACGR (%) = the estimated graduates from all students minus SPED graduates divided by the estimated total cohort of all students minus SPED within the cohort (i.e., using state level ACGRs). SPED ACGR (%) = the actual state level ACGR from 2016–17. Gap between Non-SPED and SPED 2017 ACGR (Percentage Points) = the estimated non-SPED ACGR minus the SPED ACGR.

Note. Total Cohort Size (N) = the sum of all students in the 9th grade cohort in the district level ACGR file listed below. Percent of Limited English Proficient Students within the Cohort (%) = the number of LEP students divided by the total cohort size within each state. Estimated Non-LEP ACGR (%) = the estimated graduates from all students minus LEP graduates divided by the estimated total cohort of all students minus LEP within the cohort (i.e., using state level ACGRs). LEP ACGR (%) = the actual state level ACGR from 2016−17. Gap between Non-LEP and LEP 2017 ACGR (Percentage Points) = the estimated non-LEP ACGR minus the LEP ACGR.

Sources: U.S. Department of Education through provisional data file of SY2016−17 District and State Level Four-Year Regulatory Adjusted Cohort Graduation Rates.

Note. † = Not applicable: Data are not expected to be reported by the SEA for SY2016−17. The number of additional graduates needed to reach 90 percent graduation rate(s) for all students and each subgroup was calculated using the aggregated 2016−17 state level ACGR file (i.e., for the state level cohort sizes) and the 2016−17 graduation rates. The Asian/Pacific Islander column represents either the value reported by the state to the Department of Education for the major racial and ethnic group "Asian/Pacific Islander" or an aggregation of values reported by the state for the major racial and ethnic groups "Asian," "Native Hawaiian/Other Pacific Islander or Pacific Islander," and "Filipino." (California is the only state currently using the major racial and ethnic group "Filipino.")

*−Initial ACGR scores are taken from 2013 for Kentucky and Oklahoma and from 2014 for Idaho, as those states were not yet reporting Adjusted Cohort Graduation Rates in 2011

Appendix N • State ESSA Plan's Graduation Rate Goals

State	2011 ACGR	2017 ACGR	ACGR Growth 2011–2017	ESSA Plan Approved?	ESSA Long-Term Goal for All Students	Using Extended Year Grad Rates in Accountability Plan?	Set Long-Term Extended Year Grad Rate Goal(s) for All Students?
Alabama	72%	89.30%	17.30%	Y	93.62% by 2030	Yes (5-year rate)	Yes (95% by 2030)
Alaska	68%	78.20%	10.20%	Y	90% by 2027	Yes (5-year rate)	Yes (93% by 2027
Arizona	78%	78.00%	0.00%	Y	90% by 2030	Yes (5-, 6-, and 7-year rates)	No
Arkansas	81%	88.00%	7.00%	Y	94% by 2028	Yes (5-year rate)	Yes (97% by 2028)
California	76%	82.70%	6.70%	Y	By 2022, all HS and student subgroups will be in the 90–95% grad rate range and maintaining or increasing graduation rate	No (Exploring use of 5-year rates)	No
Colorado	74%	79.10%	5.10%	Y	90.3% by 6 years following baseline	Yes (5-, 6-, and 7-year rates)	Yes (Close the between baseline and 100 percent by 25 percent for 7-year rates within 5 years)
Connecticut	83%	87.90%	4.90%	Y	94% by 2029	Yes (6-year rate)	No (Set target of 94%)
Delaware	78%	86.90%	8.90%	Y	92.1% by 2030	Yes (5- and 6-year rates)	Yes (92.9% 5-year rate by 2030; 93% 6-year rate by 2030)
District of Columbia	59%	73.20%	14.20%	Y	90% by 2039	No	No
Florida	71%	82.30%	11.30%	Y	85% by 2020	No	No
Georgia	67%	80.60%	13.60%	Y	Schools must close the gap between baseline and 100% by 45% over 15 years (average of 3% increase per year); once schools hit 90%, they will be expected to maintain or increase rate	Yes (5-year rate)	Yes (Schools must close gap between baseline and 100%, increasing 5-year rate 3% a year on average)
Hawaii	80%	82.70%	2.70%	Y	90% by 2025	No	No
Idaho	†	79.70%	†	Y	95% by 2023	No (currently developing a 5-year cohort graduation rate calculation)	No
Illinois	84%	87.00%	3.00%	Y	90% by 2032	Yes (5- and 6-year rates)	Yes (92% 5-year rate by 2032; 92.5% 6-year rate by 2032)
Indiana	86%	83.80%	-2.20%	Y	87.9% by 2023	Yes (5-year rate)	No (Will use the 4-year rate, plus the difference between 4- and 5-year rates for grad rate indicator)
Iowa	88%	91.00%	3.00%	Y	95% by 2022	Yes (5-year rate)	Yes (97% by 2022)
Kansas	83%	86.50%	3.50%	Y	95% by 2030	No	No
Kentucky	†	89.70%	†	Y	Between 2019 and 2030, schools must reduce the number of students not graduating in 4 years by 50%. 2019 baseline will be determined by calculated based on graduation rate data from 2014–2016.	Yes (5-year rate)	Yes (Reduce the number of students not graduating within 5 years by 50% by 2030 using same calculation as for 4-year rate goal)
Louisiana	71%	78.10%	7.10%	Y	90% by 2025	No	No
Maine	84%	86.90%	2.90%	Y	90% by 2030	Yes	Yes (92% by 2030)
Maryland	83%	87.70%	4.70%	Y	88.49% by 2020	Yes (5-year rate)	Yes (89.78% by 2020)
Massachusetts	83%	88.30%	5.30%	Y	91% by 2020	Yes (Using "extended engagement rate" to include 5-year graduates + students still enrolled after 5 years as SQSS indicator)	No
Michigan	74%	80.20%	6.20%	Y	94.44% by 2025	Yes (5- and 6-year rates)	Yes (96.49% 5-year rate by 2025; 97% 6-year rate by 2025)
Minnesota	77%	82.70%	5.70%	Y	90% by 2020	No	No
Mississippi	75%	83.00%	8.00%	Y	90% by 2025	No	No

Appendix N • State ESSA Plan's Graduation Rate Goals *(continued)*

State	2011 ACGR	2017 ACGR	ACGR Growth 2011–2017	ESSA Plan Approved?	ESSA Long-Term Goal for All Students	Using Extended Year Grad Rates in Accountability Plan?	Set Long-Term Extended Year Grad Rate Goal(s) for All Students?
Missouri	81%	88.30%	7.30%	Y	Cut failure to graduate rate (4-years) by half over 10 years; this translates to an annual improvement rate of one-half of one percentage point gain per year.	No	No
Montana	82%	85.80%	3.80%	Y	89.5% by 2022	No	No
Nebraska	86%	89.10%	3.10%	Y	94.4% by 2026	Yes (7-year rate)	Yes (96% 7-year rate by 2026)
Nevada	62%	80.90%	18.90%	Y	84% by 2022	Yes (5-year rate)	Yes (86% by 2022)
New Hampshire	86%	88.90%	2.90%	Y	93.96% by 2025	Yes (5-year rates)	No (Will use the 5-year rate as part of their graduation rate indicator)
New Jersey	83%	90.50%	7.50%	Y	95% by 2030	Yes (5-year rates)	Yes (96% by 2030)
New Mexico	63%	71.10%	8.10%	Y	84.5% by 2022	Yes (5- and 6-year rates)	Yes (88% 5-year rate by 2021; 90% 6-year rate by 2020)
New York	77%	81.80%	4.80%	Y	83.3% by 2022 (Will re-evaluate annually to reach ultimate end goal of 95%)	Yes (5-year rate)	Yes (85.6% by 2022; will re-evaluate annually to reach ultimate end goal of 96%)
North Carolina	78%	86.60%	8.60%	Y	95% by 2027	No (Reports 5-year rates but is not including them in their accountability plan)	No
North Dakota	86%	87.20%	1.20%	Y	90% by 2024	Yes (5- and 6-year rates)	Yes (92% 5-year rate by 2024; 93% 6-year rate by 2024)
Ohio	80%	84.20%	4.20%	Y	93% by 2026	Yes (5-year rate)	95% by 2026
Oklahoma	†	82.60%	†	Y	90% by 2025	Yes (5- and 6-year rates)	No (Will set goals moving forward)
Oregon	68%	76.70%	8.70%	Y	90% by 2025	Yes (5-year rate)	Yes (93% by 2025)
Pennsylvania	83%	86.60%	3.60%	Y	92.4% by 2030	Yes (5-year rate)	Yes (93.5% by 2030)
Rhode Island	77%	84.10%	7.10%	Y	95% by 2025	Yes (5- and 6-year rates)	No (Using an equally-weighted composite of 4-, 5-, and 6-year rates as grad rate indicator)
South Carolina	74%	83.60%	9.60%	Y	90% by 2035	No	No
South Dakota	83%	83.70%	0.70%	Y	100% by 2031	No	No
Tennessee	86%	89.80%	3.80%	Y	95% by 2025	No (will report ER grad rates publicly but not count towards accountability)	No
Texas	86%	89.70%	3.70%	Y	94% by 2032	Yes (5- and 6-year rates)	Yes (96% 5-year rate by 2031; 97% 6-year rate by 2030)
Utah	76%	86.00%	10.00%	Y	90.1% by 2022	No	No
Vermont	87%	89.10%	2.10%	Y	90% by 2025; 100% of schools will have a 90% graduation rate by 2025; grad rate indicator will be based on average of 4- and 6-year rate	Yes (6-year rate)	Yes (By 2025, 100% of schools will have 100% of students meet graduation proficiences within 6 years)
Virginia	82%	86.90%	4.90%	Y	84% by 2025	Yes (5- and 6-year rates)	Yes (85% 5-year rate by 2025; 86% 6-year rate by 2025)
Washington	76%	79.40%	3.40%	Y	90% by 2027	No	No (Will include upward adjustment for schools graduating relatively high percentages of students in extended timeframe; will report 5-, 6-, and 7-year grad rates on state report card)
West Virginia	78%	89.40%	11.40%	Y	95% by 2030	Yes (5-year rate)	No
Wisconsin	87%	88.60%	1.60%	Y	90.4% by 2023	Yes (7-year rate)	93.5% by 2023
Wyoming	80%	86.20%	6.20%	Y	88% within 15 years	No	No

All baseline graduation rates reflect what is reported in the state's approved ESSA plans, as posted by the Department of Education.
DS = Data Suppressed
(1) In 2017, Arizona is changing their methodology for determining EL subgroup graduation from counting only students still considered to be EL in 12th grade to all students who were ever classified as EL during high school. Baseline and interim progress goals will be adjusted accordingly under new methodology.
(2) Florida's graduation rate goal for student subgroups is based on closing defined gaps between White and Hispanic students, White and Black students, White and Asian students, low-income and non-low-income students, students with disabilities and students w/o disabilities, and ELs and non-ELs.
(3) Washington's projected 2017 Graduation Rates are provided in their state plan, which are used here for the baseline subgroup grad rates
(4) California's subgroup goal for white students is based on increasing from the baseline.
(5) While New Hampshire is using the 2016–17 school year as their plans baseline, graduation rates for the 2014–15 and 2015–16 school year are used as graduation rate data are lagged. The 2015–16 baseline numbers from the approved New Hampshire plan are reflected in this appendix.
(6) New York also has an "end goal" of a 95% graduation for all student subgroups but no date by which to reach them
(7) South Carolina has a goal of reducing the number of students who do not graduate within 4-years by 50 percent by 2026.
